Arctic Governance in a Changing World

This comprehensive text explains the relationship between the Arctic and the wider world through the lenses of international relations, international law, and political economy. It is an essential resource for any student or scholar seeking a clear and succinct account of a region of ever-growing importance to the international community. Highlights include:

Broad coverage of national and human security, Arctic economies, international political economy, human rights, the rights of indigenous people, the law of the sea, navigation, and environmental governance.

A clear review of current climate-related change.

Emphasis on the sources of cooperation in the Arctic through international relations theory and law.

Examination of the Arctic in the broader global context, illustrating its inextricable links to global processes.

Forfatter: Mary Durfee ; Rachael Lorna Johnstone **Type:** Book | Bog **Årstal:** 2019 **Emner:** Arctic; Governance; International relations; International law; Indigenous peoples; Law of the sea; Environment; Human rights; Security **Udgivelsessted:** Lanham, MD **Udgivelsesland:** USA **Udgave:** 1 **Forlag:** Rowman

In the Shadow of the Mountain: Assessing early impacts on community development from two mining prospects in South Greenland

The study presented in this paper explored how people in South Greenland perceive their future prospects and the role of mining in this regard. This region hosts two important mining projects still in relatively early stages. The study further investigated how mining projects influence local decisions about individual and community development. The study is based on qualitative interviews with people from the towns of Narsaq and Qaqortoq and from a sheep farm near Narsaq, during a fieldtrip in May 2017. The authors found that the mining projects, even though they are still in the exploration phase, have already had great impact on local expectations for future development and on decision-making and planning in people's daily lives and thereby the development of the communities. Further, although located relatively close together in the same region, there are significant differences between the towns and their relations to the neighboring mining projects. There is both support and opposition towards the projects, which triggers division between individuals, between groups and between the towns. However, all agree on a need for more transparent processes and for timelines to inform people of when they can expect decisions to be made and activities to take place.

Grønlændernes deltagelse i socialforskningen i Grønland

Den dansk dirigerede grønlandske samfundsforskning i Grønland tog for alvor fart i tiden efter Anden Verdenskrig. Det skete sideløbende med det nyligt oprettede FN's kritik af forholdene i de danske kolonier. Retsforhold, vedfærdsforhold og andre sociologiske emner som f.eks. samarbejdet mellem grønlandere og danskere skulle undersøges. Man startede med at studere betingelserne for oprettelsen af en specifik grønlandsk lovgivning. Senere oprettede Grønlandsministeriet Udvalget for samfundsvidenskabelig forskning i Grønland (USG).

Dette igangsætter en tradition omkring samfundsforskning i Grønland med et dansk perspektiv. Verner Goldschmidt gjorde en del for inddrage blandt Guldborg Chemnitz i det analytiske arbejde. Dog hører det til sjældenhederne at grønlanderne deltog i forskningsarbejdet i deres eget land. Der er siden opstået en diskurs om at samfundsvidenskabelig forskning om Grønland i overvejende grad begås af danske forskningsinstitutioner, hvilket også gør sig gældende for øvrige videnskaber. En tendens der forstærket af Selvstyrets fortsatte rekvirering af denne forskning. Denne tendens har forskere som Linda Tuhiwai Schmidt har gjort meget for at påpege. Der arbejdes med en moddiskurs kaldet decolonizing methodology. Herhjemme

har vi få men centrale reaktioner fra grønlandske forskere, embedsmænd og politikere omkring dette. Heri blandt Ilisimatusarfiks første rektor Robert Petersen, ministrene Stephen Heilmann og Henriette Rasmussen. Endvidere har vi kritiske bemærkninger fra forskningskoordinatorer som Mogens Holm mv. Alle beklager den herskende distancerede diskurs, som tilmed skaber et udefraskuende perspektiv på samfundet. Dette afsnit vil summarisk forholde sig til dele af denne udvikling, diskutere modreaktioner, vise tendenser og modtendenser samt illustrere med et par cases, hvordan der med enkle ændringer i forskningsdesigns kan laves mere inddragende og vedblivende forskning herhjemme.

Tolkning i det grønlandske retsvæsen - Kalaallit Nunaanni eqqrtuussivinni nutserisarneq

Denne undersøgelse ser på om retterne i Grønland lever op til Den Europæiske Menneskerettighedskonventions krav om tolkning. Undersøgelsen dækker tolkning i kriminalsager i grønlandsk dansk, men også i begrænset omfang andre sprog. Der sættes fokus på følgende forhold:

1. De rammer, som det grønlandske retsvæsen tilbyder for at sikre den rette tolkebistand.
2. I hvilket omfang der tages hensyn til nord- og østgrønlandske brugere af retten.
3. Tolkenes kompetencer med hensyn til sprog, tolketekning og professionalisme.

Population genomics of grey wolves and wolf-like canids in North America

North America is currently home to a number of grey wolf (*Canis lupus*) and wolf-like canid populations, including the coyote (*Canis latrans*) and the taxonomically controversial red, Eastern timber and Great Lakes wolves. We explored their population structure and regional gene flow using a dataset of 40 full genome sequences that represent the extant diversity of North American wolves and wolf-like canid populations. This included 15 new genomes (13 North American grey wolves, 1 red wolf and 1 Eastern timber/Great Lakes wolf), ranging from 0.4 to 15x coverage. In addition to providing full genome support for the previously proposed coyote-wolf admixture origin for the taxonomically controversial red, Eastern timber and Great Lakes wolves, the discriminatory power offered by our dataset suggests all North American grey wolves, including the Mexican form, are monophyletic, and thus share a common ancestor to the exclusion of all other wolves. Furthermore, we identify three distinct populations in the high arctic, one being a previously unidentified "Polar wolf" population endemic to Ellesmere Island and Greenland. Genetic diversity analyses reveal particularly high inbreeding and low heterozygosity in these Polar wolves, consistent with long-term isolation from the other North American wolves.

Fra »GRØXIT« – Grønlands exit af EF - til partnerskab med EU

Grønland og EU har et helt specielt partnerskab, gentog begge parter i sommer under en række møder, hvor bl.a. Partnerskabsaftalen vedrørende uddannelse blev behandlet. Forholdet startede dog knap så smidigt, og i første halvdel af 1980'erne var skilsmissemis en realitet.

50 years of Arctic social policy and social work education – the Greenlandic case

Greenland is on the one hand a unique case of independent Arctic social policy development and social work education. On the other hand, severe social challenges are still evident in the form of violence towards women, youth suicide (perhaps the highest in the world), and low levels of child welfare.

This paper presents, for the first time, a coherent 50-year historical timeline starting with the National Council's (Landsrådet) administration of social and labour market affairs in 1968, before the Home Rule Act of 1979 - concluding by examining current social policies anno 2018. It is discussed how social challenges, as listed above, can be linked to previous administration's struggle to anchor the social work profession to social policy development.

In Greenland, the social work education began in 1985. Today, social workers are graduating with a bachelor-degree in accordance with The Bologna Process. However, as a profession, the Greenlandic social workers are still not organized in a labour union. This poses an essential problem in terms of being able to express a voice from a professional point of view in the social political debate.

Across the Arctic the Greenlandic case is rare in regards to the historic formation of an indigenous people's administration of social policies. This is only in the making in neighboring countries.

Finally, the paper discusses the relation between an independent social work education, the necessity for a social worker labour union and the forming of future Arctic social policies.

The evolutionary history of dogs in the Americas

Dogs were present in the Americas before the arrival of European colonists, but the origin and fate of these precontact dogs are largely unknown. We sequenced 71 mitochondrial and 7 nuclear genomes from ancient North American and Siberian dogs from time frames spanning ~9000 years. Our analysis indicates that American dogs were not derived from North American wolves. Instead, American dogs form a monophyletic lineage that likely originated in Siberia and dispersed into the Americas alongside people. After the arrival of Europeans, native American dogs almost completely disappeared, leaving a minimal genetic legacy in modern dog populations. The closest detectable extant lineage to precontact American dogs is the canine transmissible venereal tumor, a contagious cancer clone derived from an individual dog that lived up to 8000 years ago.

Vulnerability and social change in Greenland: How can the Greenlandic Red Cross' national vulnerability study informs future social action

Previous social and public health research has documented a range of issues concerning vulnerability in different groups that could be target groups for vulnerability prevention actions. A research collaboration between Red Cross Greenland (Kalaallit Røde Korsiat), Red Cross Iceland and the University of Greenland has partnered to, through mixed methods studies, identify potential vulnerable groups in Greenland. Red Cross Greenland will use the study as an indication of where to proceed with future social action. From a research point of view, we get a national perspective of which groups the geographically wide spread Greenlandic population across social classes perceive as the main vulnerable groups.

MIXED METHODS

The main research instrument of the vulnerability study is a questionnaire which was applied to a representative study including 1.000 respondents (total adult population: 40.000). This was combined with focus group interviews: 8 different focus groups across the country. Finally, we reached out, nationwide, to formal and informal experts to get their perspectives on vulnerable groups.

The joint research effort has accumulated a substantial amount of data on 'vulnerability' in different formats (including both quantitative and qualitative data), and gathered by applying different research methods. The data enable us to identify, analyse conditions and perceptions of vulnerability and, furthermore, discuss public as well as volunteer sector strategies and approaches towards vulnerable groups.

An illustration of 50 years of social administration & social work in Greenland

By 2018, Greenland has officially had an independent controlled social and labour administration for 50 years.

The realization in 1968 took place 12 years before the signing of the Greenlandic home rule act in 1979.

The taking over of the social and labour administration became a historical turning point for the introduction of a more organized and democratic social welfare system.

Iceland's Accession to the Antarctic Treaty

On 13th October 2015, Iceland quietly submitted its instrument of accession to the Antarctic Treaty to the US Department of State (the depositary for the Antarctic Treaty). Iceland's accession was not accompanied by any official declaration or public discussion in Iceland or elsewhere. This paper investigates some of the factors that are likely to have spurred the decision to join the Antarctic treaty system, examines current Icelandic interests in the Antarctic and proposes constructive policies to enhance Icelandic involvement in Antarctic governance and cooperation following the accession. The authors conclude that logistical operations and adventure tourism involving Icelandic companies in the Antarctic are the most likely triggers for the accession and they propose that Iceland consider ratification of the Protocol on Environmental Protection to the Antarctic Treaty (Madrid Protocol).

Grønlandsk politisk neokonservatisme overskygger for åbne socialpolitikker

Det problematiseres at det politiske fokus herhjemme handler om middelklassens ve og vel. Man kunne skabe mere rummelige grønlandske socialpolitikker og fokusere på det brede samfund. Et kritiske modtryk til hvad der her kaldes neokonservatisme bør skabes.

Patient Participation in Healthcare Practice in Greenland: Local Challenges and Global Reflections

Various kinds of user and patient involvement are spreading in healthcare in most Western countries. The purpose of this study is to critically assess the actual conditions for patients' involvement in healthcare practice in Greenland and to point to possibilities for development. Patients' perspectives on their own conduct of everyday life with illness and their possibilities for participation when hospitalized are examined in relation to the conditions in a hospital setting dominated by biomedical practice. On a theoretical level, it is argued that the concept of 'participation' is preferable to the concept 'involvement' in healthcare. The study shows that there are several interconnected areas for development: the structural frames of hospital practice, including professionals' possibilities for handling patient participation, and the agency of the patients conducting their everyday lives when hospitalized. Consequences of the biomedical hegemony are discussed in relation to WHO's broader approach to disease, illness and health and the still existing postcolonial traces of power and hierarchy. Finally it is argued that patient participation during hospitalization will promote the patients' conduct of everyday life, the cultural knowledge of the professionals, and the democratization of the healthcare sector. Such changes might be connected to a more encompassing democratic societal development – in Greenland as well as globally.

Greenland

Providing an in-depth look at the lives of women and girls in approximately 150 countries, this multivolume reference set offers readers transnational and postcolonial analysis of the many issues that are critical to the survival and success of women and girls.

For millennia, women around the world have shouldered the responsibility of caring for their families. But in recent decades, women have emerged as a major part of the global work force, balancing careers and family life. How did this change happen? And how are societies in developing countries responding and adapting to women's newer roles in society? This four-volume encyclopedia examine the lives of women around the world, with coverage that includes the education of girls and teens; the key roles women play in their families, careers, religions, and cultures; how issues for women intersect with colonialism, transnationalism, feminism, and established norms of power and control.

Organized geographically, each volume presents detailed entries about the lives of women in particular countries. Additionally, each volume offers sidebars that spotlight topics related to women and girls in specific regions or focus on individual women's lives and contributions. Primary source documents include sections of countries' constitutions that are relevant to women and girls, United Nations resolutions and national resolutions regarding women and girls, and religious statements and proclamations about women and girls. The organization of the set enables readers to take an in-depth look at individual countries as well as to make comparisons across countries.

Sårbare grupper i Grønland - Kalaallit Røde Kors' Sårbarhedsanalyse 2017-18

Sårbarhedsundersøgelsen har identificeret, hvilke grupper i landet der ifølge en befolkningsundersøgelse, fokusgrupper, litteraturstudier og eksperter var dårligst stillede. En af samfundets vigtigste roller er at arbejde med og for dem som er identificeret som sårbare. Resultaterne skal hjælpe foreningen (Røde Kors) og dens afdelinger rundt om i landet (Island) med at identificere de mest presserende behov, og dermed bedre prioritere foreningens aktiviteter.

Everyday life with chronic illness: developing a democratic and culture-sensitive healthcare practice

The growing incidence of chronic diseases and an ageing population, worldwide as well as in Greenland, call for an intensified focus on health promotion and rehabilitation. However, research shows that the existing disease-oriented healthcare system is not geared to manage the psychosocial problems of chronically ill or disabled citizens. The problem is related to the prevailing biomedical institutional structures where expert- and professional knowledge trumps the knowledge and perspectives of the users of the institutions. Speaking

about health in the broad sense of WHO, there is a need for an intensified focus on wellbeing, not only physical health. The chapter presents the visions for an ongoing research project in Sermersooq Municipality.

The research aims at developing knowledge about the citizens' everyday lives with illness or disabilities, their cultural values and perspectives. Involving this kind of knowledge in professional practice requires the professionals' reflection on means and ends in a welfare institution like home care. Welfare-professional contributions are meant to support citizen participation in social living. Therefore, professionals must learn about citizens' social and cultural conditions for managing their lives.

Furthermore, the project aims at revealing and describing the conditions for professional practice as a contribution to the professionals' abilities to analyze their practice.

The material is developed through participant observations in the municipality and the citizens' homes, and qualitative interviews with citizens, care personnel, therapists, and leaders on different levels.

The expected outcome is a set of tools for professional practice reflection following the principles described above.

Conventional classroom teaching through ICT and distance teaching. A case study from Greenland

This paper presents a case study on distance teaching in a school in Greenland. Data from work on Grounded Theory is used to investigate ways of utilizing distance teaching in the school. The analysis draws on a prevalent perspective on distance teaching as providing access to education. The perspective combines with Michel Foucault's concept of "governmentality".

I will show how progressive possibilities are not necessarily to be found in ICT-driven distance teaching. Pedagogical drivers operate behind the choices of ICT equipment and ICT solutions which, in this case, brings ICT under the command of a less progressive pedagogical agenda.

As I will show, the commitment from the municipality and from the teachers was to use distance teaching and ICT for conventional schooling. The case lays the ground for a discussion on the progressivity of distance teaching and the use of advanced ICT solutions in schools. My aim with the paper is to add to the understanding of the scope of distance teaching in schools. Does ICT and distance teaching serve progressive ends per se? What do we learn about distance teaching from this setup in the school in Greenland?

Rehabilitering i hverdagslivet: Borgerperspektiver på livet som gammel i Nuuk

The article reports some results from a study about an Everyday rehabilitation-project in Kommuneqarfik Sermersooq. Everyday rehabilitation in home care has spread rapidly in Scandinavia through the last few years and is part of a worldwide focus on 'active ageing' because of a growing share of people 65+ years. Many citizens benefit from rehabilitative services, but research shows that those in most need often are excluded from home care services because of a one-sided focus on 'growth'. This can bring along conflicts between professionals and citizens and a lack of relevant support for citizens. The purpose of this study was to investigate citizens' perspectives on a good life as old in Nuuk and how rehabilitation can support them in conducting a meaningful life from their own perspectives.

The study was conducted as an ethnographic field study. The methods were participant observations, qualitative interviews and document analysis.

The study shows that home care and rehabilitation services are concentrated on practical and instrumental help, disconnected from the citizens' everyday life, their resources and values. This has a passivating and demotivating effect. Old people are proud of their achievements in life, they are actively managing their lives on a daily basis, and they have dreams for the future. But they do need professional assistance. Their everyday life-knowledge and perspectives have to be integrated in professional practice in order to improve the quality of home care services through cooperation between citizens and professionals. An action possibility is proposed, namely a certain approach to 'life stories' as an instrument to involve the citizens as participants in home care and rehabilitation.

Sustainable Development and Sustainability in Arctic Political Discourses

The Routledge Handbook of the Polar Regions is an authoritative guide to the Arctic and the Antarctic through an exploration of key areas of research in the physical and natural sciences and the social sciences and humanities. It presents 38 new and original contributions from leading figures and voices in polar research, policy and practice, as well as work from emerging scholars.

This handbook aims to approach and understand the Polar Regions as places that are at the forefront of global conversations about some of the most pressing contemporary issues and research questions of our age. The volume provides a discussion of the similarities and differences between the two regions to help deepen understanding and knowledge. Major themes and issues are integrated in the comprehensive introduction chapter by the editors, who are top researchers in their respective fields. The contributions show how polar researchers engage with contemporary debates and use interdisciplinary and multidisciplinary approaches to address new developments as well as map out exciting trajectories for future work in the Arctic and the Antarctic.

The handbook provides an easy access to key items of scholarly literature and material otherwise inaccessible or scattered throughout a variety of specialist journals and books. A unique one-stop research resource for researchers and policymakers with an interest in the Arctic and Antarctic, it is also a comprehensive reference work for graduate and advanced undergraduate students.

Uden udsigt? Forvaringsdømt i Grønland – i dag og fremover

I 2019 forventes Grønlands første fængsel eller lukkede anstalt, som er den officielle betegnelse, at blive taget i brug. Den grønlandske kriminallov bygger på principper om resocialisering af lovbyggere og at undgå indespærringens skadelige virkninger. Hidtil har afsoning fundet sted i såkaldte åbne anstalter, hvor hensigten var, at domfældte skulle være beskæftiget i byen mens de afsonede. Med den nye anstalt bliver Grønland som "landet uden fængsel", officielt fortid. Desuden slutter en lang tradition med at sende grønlandske forvaringsdømte til afsoning i Danmark. Forvaring er kriminallovens strengeste foranstaltning. Forvaringsdommen kan fuldbyrdes i en grønlandsk anstalt eller "en psykiatrisk ledet anstalt under Kriminalforsorgen i Danmark", Herstedvester Fængsel. Næsten en fjerdedel af Grønlands indsatte afsoner en forvaringsdom, og ca. en femtedel af alle indsatte er sendt ud af landet til afsoning i Herstedvester. Denne artikel vil kaste lys på den grønlandske forvaringsdom og dens konsekvenser for de dømte. Desuden vil forventninger til Grønlands nye lukkede anstalt blive undersøgt.

Health and well-being

Residents across the Baffin Bay/Davis Strait (BBDS) region have experienced common challenges in relation to rapid development and changes in living conditions, and they continue to adapt to the legacy of colonization. However, there are still significant symptoms of social problems and mental vulnerability. The strong relation to nature and the importance of artistic creativity and cohesion remain central to the life of Inuit. These factors are of great importance for mental health and well-being.

Non-living resources

Commodity prices, together with extraction prices and technology development – not climate change effects – are the main drivers of change in the Baffin Bay/ Davis Strait (BBDS) non-living resources sector. The commodity prices of mineral resources are expected to decline in the coming years.

Summary of adaptation options for the BBDS region

The following sections summarize the main adaptation options from this report, consider and consolidate the sectoral responses outlined in previous chapters, and add relevant adaptation options from other sources, including Arctic Council reports.

Improving Public Participation in Greenland Extractive Industries

This contribution is based on a seminar and workshop on public participation processes related to extractive industries in the Arctic, organized by the Arctic Oil and Gas Research Centre at Ilisimatusarfik (University of Greenland) on October 17th and 18th 2017. The seminar was led by experts on extractive industries, indigenous peoples, impact assessments, law, and public participation. They came from Greenland, Denmark, Iceland, Norway, Russia, Scotland, England and Brazil. The seminar was open to the public and was well attended by representatives from the ministries, municipal governments, academic and research institutes, NGOs and others. A select group of invited experts and a group of graduate students from Ilisimatusarfik took part in the workshop.

Mexican Real Wages Before the Revolution: A Reappraisal

Seminal literature has documented broadly the living conditions of Mexican workers before the Revolution of 1910. Various authors argue that a continuous deterioration of real wages in the preceding years of the Mexican revolution contributed to the social unrest that led to the armed conflict. Yet, most of the quantitative evidence has focused on aggregate estimates overlooking the regional wage dynamics. Through regional historical data, this article reevaluates quantitatively the patterns of Mexican regional real wages providing new estimates for the period 1877-c.1910. The analysis reveals that a divergent pattern between sectors and regions emerged during these years. However, the study also shows that in general, locally-adjusted regional real wages remained relatively stable throughout the period.

Everyday life with chronic illness: physical health or well-being?

The background of the study reported in this chapter was the growing number of chronically ill patients. The purpose was to explore patients' perspectives on life with chronic illness and how it relates to healthcare practice. The research was conducted as an ethnographic field study. A conclusion of the study is that the disease-oriented healthcare system is not geared to deal with rehabilitation because of a narrow focus on disease and treatment, and the exclusion of patients' knowledge. However, knowledge about patients' everyday life and perspectives hold potentials for rehabilitative and health promotional professional interventions.

Little Fish, Big Pond: Icelandic Interests and Influence in Arctic Governance

On pretty much any measure of international comparison, Iceland is a little fish. Nevertheless, its geographical location next to the Big Pond that is the Arctic Ocean has put it in a position of influence in a region of growing international importance.

In this paper, we explore Iceland's influence in the Arctic region based on international relations considerations such as its political alliances; and based on international law: Iceland's rights and responsibilities.

The paper presents the Arctic Council and Iceland's role within it before turning to issues that are governed

outside of the Arctic Council system, in particular, Arctic fisheries and maritime boundaries. The paper explains Iceland's approach to Arctic cooperation in light of its published policy documents and explores the tools available to Iceland to defend its interests.

Kvalitative analysemetoder i sundhedsforskning

Kapitlet introducerer til en analysemetode, som bygger på socialpsykologisk teori om strukturer og relationer i social praksis. Betingelses-, betydnings- og begrundelsesanalysen integrerer samfundsmæssige og institutionelle strukturer i brugernes daglige livsførelse og i professionel praksis. Formålet med analysen er at vise sammenhængen mellem institutionel praksis og brugernes daglige livsførelse med fx sundhedsproblemer, hvordan de forskellige praksisser påvirker hinanden, og hvilke muligheder og problemer, de rummer. Ved hjælp af eksempler fra empirisk forskning i patientperspektiver på sundhedspraksis i Grønland vises det, hvordan analysemetoden kan bruges på empirisk materiale, hvilke former for viden og praksis den analyserer, og hvilken viden og hvilke handlemuligheder, den kan generere.

Tusagassiutit 2018 - en kortlægning af de grønlandske medier

Første del af rapporten beskriver det grønlandske medielandskab, og giver et billede af de nyhedsmedier der findes og de journalister, der arbejder der.

Anden del af rapporten beskriver forbruget af nyhedsmedier hos befolkningen i Grønland, og giver et billede af hvilke nyhedsmedier der benyttes hvor og af hvem.

Tredje del af rapporten er en analyse af indholdet i grønlandske nyhedsmedier, der blandt andet viser hvilke kilder der typisk kommer til orde i medierne.

Trivsel & udbændthed i det socialfaglige arbejdsliv

I rapporten undersøges forekomsten af trivsel og udbændthed blandt ansatte i Grønlands sociale sektor ved hjælp af et online spørgeskema.

Undersøgelsen er den første af sin slags i mere end 10 år. Ud af 348 adspurgte svarede omkring 200 ansatte inden for socialområdet på spørgsmål om trivsel i arbejdslivet med afsæt i en række baggrundsspørgsmål om køn, løn, arbejdssted, kommune osv. Undersøgelsen er udformet som et åbent spørgeskema med en indlagt test om det psykiske arbejdsmiljø, som er baseret på en Maslach Burnout Inventory. Langt størstedelen af de adspurgte inden for det sociale område oplever at de trives i deres arbejde. Det forekommer dog for ca. 1 ud af 4 at de føler sig udkørte når arbejdsdagen er ovre. Undersøgelsen peger endvidere på en lav anciennitet på området og det kan vække bekymring. Lav anciennitet kan resultere i en lav organisationshukommelse og kan kobles til med udfordringer inden for socialområdet omkring kontinuitet i sagsbehandlingen og et for lavt niveau af opfølgninger på socialklienters handleplaner. Anciennitetsniveauet kan være et tegn at man på disse offentlige arbejdspladser må fastholde et fokus på at sikre et godt psykiske arbejdsmiljø til gavn for de ansatte. Fremadrettet er det vigtigt løbende at få undersøgt arbejdsmiljøet inden for det sociale område, da man særligt i børne- og familieforvaltningerne møder ansatte, som til tider arbejder under i et meget omfattende arbejdspress.

Arctic Oil & Gas Development: The Case of Greenland

Despite the fact that not a single barrel of Greenlandic oil was ever extracted, refined and consumed in or exported from Greenland, hydrocarbon has nevertheless played a significant role in contemporary economical, environmental, and political. discourses. Not least as a key political issue in Greenland as well as between Greenland and Denmark is the discourse about Greenland's development from a colony to Self-Governance (2009) via status as a Danish county (1953) and Home Rule (1979). One of the article's foci is how the discourse about and the gradual acknowledgement of the Greenlanders' rights to the Greenland subsurface has been an important part of Greenlandic nation building. Furthermore, visions for an independent Greenland have been fuelled by the hopes for 'a shortcut' via discoveries of oil and gas that eventually could compensate for the Danish block grant and pave the way for an independent Greenland. In 2012 Greenland Self-Governance took over the full authority of mineral resources including oil and gas. 2012 was also the year following explorative drillings of eight wells that were all dry. The following years were characterised by a rapidly declining interest from the oil industry in developing hydrocarbon activities in Greenland waters and demonstrated Greenland's dependency on the international market for oil. Greenland being part of a globalised world also became apparent when Greenland was confronted with, for instance, environmental concerns caused by Greenland's wish to be an oil-producing country. Conflicting interests internationally were also reflected in the results based on a national survey on attitudes to, perceptions of as well as hopes and concerns related to oil development. Some results are presented in the article.

The Far Islands and other Cold Places: Women Travelers in the Arctic, 1850–1935

This article uses historical travel writing by Anglo-European Women to investigate the construction of gendered geographies in the Far North. Applying an interdisciplinary approach that combines history, literary analysis and gender studies, the paper examines the gendered aspects of travel, and the intersectionality of gender, class and race. Using examples from two published travel accounts and personal archives, the paper will demonstrate the historical processes of gender differences and representations, as well as capture the intersectionality of literature and the construction of place in real, imaginary and symbolic terms.

The Future of Hydrocarbon Development in Greenland: Perspectives from Residents of the North Slope of Alaska

Although Greenland has pursued hydrocarbon development over the last four decades, no viable reserves have been found to date. Therefore, local Greenland communities have little experience or knowledge of how such development might affect their way of life or how to influence project development and outcomes should a significant reserve be found. On the North Slope of Alaska, in contrast, hydrocarbon extraction was commercialized in the 1970s, and the industry is now highly developed. North Slope residents have experienced dramatic influences on their everyday lives and well-being as a result of large-scale hydrocarbon projects. Some consequences have been welcomed, such as economic development and higher employment rates; however, other impacts are harmful, such as reduced ability of local peoples to maintain subsistence hunting practices. The villages on Alaska's North Slope share many features in common with settlements in Greenland, such as small size, isolation, and limited political influence. In this study, we explore how Greenlanders might learn from the Alaska experience by examining the comments of North Slope residents. We propose that increased local-to-local recommendation- sharing across the Arctic would better guide sustainable development practices and benefits into potential future projects in Greenland. We conclude that an Arctic "Community Guide" and the process to create one could improve planning and implementation of hydrocarbon projects across the Arctic and promote locally appropriate sustainable development in the affected communities.

Petroleum as a challenge to arctic societies: Ontological security and the oil- driven 'push to the north'

This paper uses the 2014–2015 plunge in oil prices as a linchpin for understanding how petroleum development represents a challenge to Arctic societies. Analysis of media discourses, grey literature and fieldwork material from 2013 to 2017 compared with previous work in the region shows that the 75% price decrease in oil price brings into stark relief the perceived level of ontological security that future petroleum economies in Northern Norway, Alaska and Greenland provides. The findings reveal that while the communities in each location find themselves along different timelines of the petroleum economy, there are transferable insights that can benefit other communities influenced by (the potential for) petroleum development in both the Arctic and beyond, in particular concerning the way in which specific ideas about oil and oils future features as contributing to or diminishes ontological security perceptions on the ground. The goal of this paper is to deepen the comparative analysis of research on tensions in Arctic communities as petroleum is perceived as either strengthening or threatening future ontological security in the region. The discussion considers the consequences of path dependent petroleum economies, and how perceptions on alternative futures can fruitfully be introduced into petroleum-dominated narratives about viable Arctic futures.

Seroprevalence for *Brucella* spp. in Baltic ringed seals (*Phoca hispida*) and East Greenland harp (*Pagophilus groenlandicus*) and hooded (*Cystophora cristata*) seals

Zoonotic infections transmitted from marine mammals to humans in the Baltic and European Arctic are of unknown significance, despite given considerable potential for transmission due to local hunt. Here we present results of an initial screening for *Brucella* spp. in Arctic and Baltic seal species. Baltic ringed seals (*Pusa hispida*, n = 12) sampled in October 2015 and Greenland Sea harp seals (*Pagophilus groenlandicus*, n = 6) and hooded seals (*Cystophora cristata*, n = 3) sampled in March 2015 were serologically analysed for antibodies against *Brucella* spp. The serological analyses were performed using the Rose Bengal Test (RBT) followed by a confirmatory testing of RBT-positive samples by a competitive-enzyme linked immunosorbent assay (C-ELISA). Two of the Baltic ringed seals (a juvenile male and a juvenile female) were seropositive thus indicating previous exposure to a *Brucella* spp. The findings indicate that ringed seals in the Baltic ecosystem may be exposed to and possibly infected by *Brucella* spp. No seropositive individuals were detected among the Greenland harp and hooded seals. Although our initial screening shows a zoonotic hazard to Baltic locals, a more in-depth epidemiological investigation is needed in order to determine the human risk associated with this.

Patient Participation in Healthcare Practice in Greenland: Local Challenges and Global Reflections

Various kinds of user and patient involvement are spreading in healthcare in most Western countries. The purpose of this study is to critically assess the actual conditions for patients' involvement in healthcare practice in Greenland and to point to possibilities for development. Patients' perspectives on their own conduct of everyday life with illness and their possibilities for participation when hospitalized are examined in relation to the conditions in a hospital setting dominated by biomedical practice. On a theoretical level, it is argued that the concept of 'participation' is preferable to the concept 'involvement' in healthcare. The study shows that there are several interconnected areas for development: the structural frames of hospital practice, including professionals' possibilities for handling patient participation, and the agency of the patients conducting their everyday lives when hospitalized. Consequences of the biomedical hegemony are discussed in relation to WHO's broader approach to disease, illness and health and the still existing postcolonial traces of power and hierarchy. Finally it is argued that patient participation during hospitalization will promote the patients' conduct of everyday life, the cultural knowledge of the professionals, and the democratization of the healthcare sector. Such changes might be connected to a more encompassing democratic societal development – in Greenland as well as globally.

Future directions for monitoring and human health research for the Arctic Monitoring and Assessment Programme

For the last two and a half decades, a network of human health experts under the Arctic Monitoring and Assessment Program (AMAP) has produced several human health assessment reports. These reports have provided a base of scientific knowledge regarding environmental contaminants and their impact on human health in the Arctic. These reports provide scientific information and policy-relevant recommendations to Arctic governments. They also support international agreements such as the Stockholm Convention on Persistent Organic Pollutants (POPs) and the Minamata Convention on Mercury. Key topics discussed in this paper regarding future human health research in the circumpolar Arctic are continued contaminant biomonitoring, health effects research and risk communication. The objective of this paper is to describe knowledge gaps and future priorities for these fields.

Immunisation rates among children in Nuuk

The children immunisation programme in Greenland correlates to the one in Denmark with the addition of the Bacille Calmette–Guerin (BCG)-vaccine and the immunisation against Hepatitis B (HBV). The immunisation rate among children in Greenland has been and is currently unknown and this study aims to estimate the immunisation rates among children in Nuuk from 1 July 2015 until 30 June 2016. We did an observational cross-sectional study based on a statistical extraction identifying all children in Nuuk eligible for an immunization in the children immunisation programme from 1 July 2015 until 30 June 2016 and a review of their medical records. We found acceptable coverage rates among children younger than 12 months, but coverage rates lower than recommended by the World Health Organization (WHO) among older children. Among children between 15 months and 4 years the coverage dropped as low as 33.9 %. Increased awareness of child immunisation rates is suggested including continuously monitoring and adjusting of the organisation of the immunisation programme.

Serum 25-hydroxyvitamin D, calcium and parathyroid hormone levels in Native and European populations in Greenland

Ca homeostasis is important to human health and tightly controlled by powerful hormonal mechanisms that display ethnic variation. Ethnic variations could occur also in Arctic populations where the traditional Inuit diet is low in Ca and sun exposure is limited. We aimed to assess factors important to parathyroid hormone (PTH) and Ca in serum in Arctic populations. We included Inuit and Caucasians aged 50–69 years living in the capital city in West or in rural East Greenland. Lifestyle factors were assessed by questionnaires. The intake of Inuit diet was assessed from a FFQ. 25-Hydroxyvitamin D (25OHD2 and 25OHD3) levels were measured in serum as was

albumin, Ca and PTH. The participation rate was 95 %, with 101 Caucasians and 434 Inuit. Median serum 25OHD (99.7 % was 25OHD3) in Caucasians/Inuit was 42/64 nmol/l (25, 75 percentiles 25, 54/51, 81) (P

Genetic determinants of glycosylated hemoglobin levels in the Greenlandic Inuit population

We previously showed that a common genetic variant leads to a remarkably increased risk of type 2 diabetes (T2D) in the small and historically isolated Greenlandic population. Motivated by this, we aimed at discovering novel genetic determinants for glycosylated hemoglobin (HbA1C) and at estimating the effect of known HbA1C-associated loci in the Greenlandic population. We analyzed genotype data from 4049 Greenlanders generated using the Illumina Cardio-MetaboChip. We performed the discovery association analysis by an additive linear mixed model. To estimate the effect of known HbA1C-associated loci, we modeled the effect in the European and Inuit ancestry proportions of the Greenlandic genome (EAPGG and IAPGG, respectively). After correcting for multiple testing, we found no novel significant associations. When we investigated loci known to associate with HbA1C levels, we found that the lead variant in the GCK locus associated significantly with HbA1C levels in the IAPGG ($\beta_{IAPGG}=4.8\times 10^{-6}$, $\beta_{EAPGG}=0.13SD$). Furthermore, for 10 of 15 known HbA1C loci, the effects in IAPGG were similar to the previously reported effects. Interestingly, the ANK1 locus showed a statistically significant ancestral population differential effect, with opposing directions of effect in the two ancestral populations. In conclusion, we found only 1 of the 15 known HbA1C loci to be significantly associated with HbA1C levels in the IAPGG and that two-thirds of the loci showed similar effects in Inuit as previously found in European and East Asian populations. Our results shed light on the genetic effects across ethnicities.

Development of health-related quality of life and symptoms in patients with advanced cancer in Greenland

A prospective national cohort study assessed the development of health-related quality of life (HRQoL) and symptoms in adult patients undergoing treatment and care for advanced cancer in Greenland. HRQoL was examined by EORTC QLQ-C30 version 3.0 questionnaire monthly for 4 months. Changes over time and between-group comparisons were examined. Of 58 patients included in the study, 47% completed the questionnaire four times. Functioning was generally high, and improved social functioning was observed after 1 and 2 months. The highest symptom score was for fatigue followed by pain and nausea/vomiting. A high score for financial problems remained unchanged during the entire period. Patients with higher income had reduced pain intensity ($p = .03$) and diarrhoea ($p = .05$) than patients with income below the poverty line. After 1 month, reduction in pain intensity was observed for Nuuk citizens compared with non-Nuuk citizens ($p = .05$). After 2 months, non-Nuuk citizens reported improved social functioning compared with Nuuk citizens ($p = .05$). After 3 months, Global Health in Nuuk citizens was improved compared with non-Nuuk citizens ($p = .05$). An important clinical finding was that patients' needs for support are related to social status, and geographical factors should be taken into account when planning palliative care.

Measuring social inequality in health amongst indigenous peoples in the Arctic. A comparison of different indicators of social disparity among the Inuit in Greenland

The purpose of the article is to compare different indicators of social position as measures of social inequality in health in a population sample from an indigenous arctic people, the Inuit in Greenland. Data was collected during 2005–2015 and consisted of information from 3967 adult Inuit from towns and villages in all parts of Greenland. Social inequalities for smoking and central obesity were analysed in relation to seven indicators of social disparity in four dimensions, i.e. education and employment, economic status, sociocultural position, and place of residence. For each indicator we calculated age-adjusted prevalence by social group, rate ratio and the concentration index. The indicators were correlated with Pearson's r ranging from 0.24 to 0.82. Concentration indices ranged from 0.01 to 0.17. We could not conclude that one indicator was superior to others. Most of the indicators were traditional socioeconomic indicators used extensively in research in western countries and these seemed to be useful among the Inuit too, in particular household assets and job. Two sociocultural indicators developed for use among the Inuit and which included parameters specific to the indigenous peoples in the transition from a traditional to a modern life style proved to be equally useful but not superior to the traditional socioeconomic indicators. The choice of indicator must depend on what it is realistic to collect in the actual research setting and the use of more than one indicator is recommended. It is suggested to further develop culture specific indicators of social position for indigenous peoples.

Three lifestyle-related issues of major significance for public health among the Inuit in contemporary Greenland: a review of adverse childhood conditions, obesity, and smoking in a period of social transition

Greenland is a country in transition from a colonial past with subsistence hunting and fishing to an urban Nordic welfare state. Epidemiological transition from infectious to chronic diseases has been evident since the 1950s. Ninety percent of the population is Inuit.

We studied three public health issues based on published literature, namely adverse childhood experiences, addictive behavior, and suicide; diet and obesity; and smoking. Alcohol consumption was high in the 1970s and 1980s with accompanying family and social disruption. This is still a cause of poor mental health and suicides in the generations most affected. The diet is changing from a traditional diet of fish and marine mammals to imported food including food items rich in sugar and fat from domestic animals, and the level of physical activity is decreasing with an ensuing epidemic rise in obesity. The prevalence of smoking is high at around 60% among both men and women and is only slowly decreasing. Smoking shows large social variation, and tobacco-related diseases are widespread.

The diseases and conditions outlined above all contribute towards a low life expectancy at birth—69 years for men and 74 years for women in 2011–2015—compared with 78 and 84 years for men and women, respectively, on average in the European countries. The translation of government public health programs into local activities needs strengthening, and it must be realized that the improvement of public health is a long-term process.

Prevalence of Diabetic Neuropathy in Young Adults with Type 1 Diabetes and the Association with Insulin Pump Therapy

Aims: The aim was to investigate the prevalence of diabetic sensorimotor polyneuropathy (DSPN) and cardiovascular autonomic neuropathy (CAN) in a Danish population of young adults with type 1 diabetes (T1D) using both established and novel measuring modalities. Furthermore, to investigate the association between continuous subcutaneous insulin infusion (CSII) treatment and these complications.

Materials and Methods: CAN was assessed by cardiovascular autonomic reflex tests. DSPN was assessed not only by perception of light touch and pain, vibration perception threshold (VPT), Brief Pain Inventory (BPI), and Michigan Neuropathy Screening Instrument questionnaires but also by novel modalities: electrochemical skin conductance (ESC), sural nerve conduction velocity (SNCV), and sural nerve amplitude potential (SNAP).

Results: The study comprised 156 young adults with a mean age of 22 years (standard deviation 1.6). The prevalence of CAN and early CAN was 9% and 28.1%, respectively. Subclinical DSPN was 55.1% and confirmed DSPN was 2.6%. Prevalence of abnormal SNAP was 23.8%, SNCV was 37.1%, ESC on the hands and feet was 4% and 8%, respectively, VPT was 1.3%, and BPI questionnaire was 1.9%. No association was found between CSII treatment and the measures of DSPN and CAN.

Conclusion: DSPN and CAN are prevalent in young adults with T1D with no association found with CSII treatment. The use of novel measuring modalities identified a higher number of subjects with DSPN compared with established measures. Screening for diabetic neuropathy in young adults may be beneficial to detect and prevent nerve damages at early stages.

RISING SUN: Prioritized Outcomes for Suicide Prevention in the Arctic

The Arctic Council, a collaborative forum among governments and Arctic communities, has highlighted the problem of suicide and potential solutions. The mental health initiative during the United States chairmanship, Reducing the Incidence of Suicide in Indigenous Groups: Strengths United Through Networks (RISING SUN), used a Delphi methodology complemented by face-to-face stakeholder discussions to identify outcomes to evaluate suicide prevention interventions. RISING SUN underscored that multilevel suicide prevention initiatives require mobilizing resources and enacting policies that promote the capacity for wellness, for example, by reducing adverse childhood experiences, increasing social equity, and mitigating the effects of colonization and poverty.

Alcohol use and burden for 195 countries and territories, 1990-2016: a systematic analysis for the Global Burden of Disease Study 2016

Background: Alcohol use is a leading risk factor for death and disability, but its overall association with health remains complex given the possible protective effects of moderate alcohol consumption on some conditions. With our comprehensive approach to health accounting within the Global Burden of Diseases, Injuries, and Risk Factors Study 2016, we generated improved estimates of alcohol use and alcohol-attributable deaths and disability-adjusted life-years (DALYs) for 195 locations from 1990 to 2016, for both sexes and for 5-year age groups between the ages of 15 years and 95 years and older.

Methods: Using 694 data sources of individual and population-level alcohol consumption, along with 592 prospective and retrospective studies on the risk of alcohol use, we produced estimates of the prevalence of current drinking, abstention, the distribution of alcohol consumption among current drinkers in standard drinks daily (defined as 10 g of pure ethyl alcohol), and alcohol-attributable deaths and DALYs. We made several methodological improvements compared with previous estimates: first, we adjusted alcohol sales estimates to take into account tourist and unrecorded consumption; second, we did a new meta-analysis of relative risks for 23 health outcomes associated with alcohol use; and third, we developed a new method to quantify the level of alcohol consumption that minimises the overall risk to individual health.

Findings: Globally, alcohol use was the seventh leading risk factor for both deaths and DALYs in 2016, accounting for 2.2% (95% uncertainty interval [UI] 1.5–3.0) of age-standardised female deaths and 6.8% (5.8–8.0) of age-standardised male deaths. Among the population aged 15–49 years, alcohol use was the leading risk factor globally in 2016, with 3.8% (95% UI 3.2–4.3) of female deaths and 12.2% (10.8–13.6) of male deaths attributable to alcohol use. For the population aged 15–49 years, female attributable DALYs were 2.3% (95% UI 2.0–2.6) and male attributable DALYs were 8.9% (7.8–9.9). The three leading causes of attributable deaths in this age group were tuberculosis (1.4% [95% UI 1.0–1.7] of total deaths), road injuries (1.2% [0.7–1.9]), and self-harm (1.1% [0.6–1.5]). For populations aged 50 years and older, cancers accounted for a large proportion of total alcohol-attributable deaths in 2016, constituting 27.1% (95% UI 21.2–33.3) of total alcohol-attributable female deaths and 18.9% (15.3–22.6) of male deaths. The level of alcohol consumption that minimised harm across health outcomes was zero (95% UI 0.0–0.8) standard drinks per week.

Interpretation: Alcohol use is a leading risk factor for global disease burden and causes substantial health loss. We found that the risk of all-cause mortality, and of cancers specifically, rises with increasing levels of consumption, and the level of consumption that minimises health loss is zero. These results suggest that alcohol control policies might need to be revised worldwide, refocusing on efforts to lower overall population-level consumption.

Associations between vitamin D status and atherosclerosis among Inuit in Greenland

Background and aims: Low levels of vitamin D are suspected to be a risk factor for cardiovascular disease and atherosclerosis. The aim of this study was to assess the prevalence of subclinical atherosclerosis among Inuit in Greenland, and to evaluate the association with vitamin D status. We hypothesized that low vitamin D status

could be associated with higher carotid intima-media thickness (IMT) as a marker of atherosclerosis.

Methods: 756 adults from the Inuit Health in Transition (IHIT) study carried out in Greenland in the period 2005–2010 were included. A blood sample donated in 1987 was available for a sub-sample of 102 individuals. Serum 25(OH)D3 from the IHIT study and the 1987 survey was used as a measure of vitamin D status. IMT measurements were conducted by ultrasound scanning. The prevalence of atherosclerosis was estimated, and the association between serum 25(OH)D3 and IMT measurements was examined by linear regression.

Results: The overall prevalence of subclinical atherosclerosis was 20.1% (n = 152). The linear regression analyses indicated a weak positive association between serum 25(OH)D3 level and IMT measurements from the IHIT study, though not statistically significant after adjustment for potential confounders ($\beta = 0.35\%$ per 10 nmol/L 25(OH)D3, $p = 0.06$). Linear regression analyses of the association between serum 25(OH)D3 level in the 1987 survey and IMT measurements also indicated a positive, though not statistically significant, association after adjustment ($\beta = 0.07\%$ per 10 nmol/L 25(OH)D3, $p = 0.86$).

Conclusions: Our findings did not support the hypothesis of an association between low vitamin D levels and risk of atherosclerosis.

Loss-of-function variants in ADCY3 increase risk of obesity and type 2 diabetes

We have identified a variant in ADCY3 (encoding adenylate cyclase 3) associated with markedly increased risk of obesity and type 2 diabetes in the Greenlandic population. The variant disrupts a splice acceptor site, and carriers have decreased ADCY3 RNA expression. Additionally, we observe an enrichment of rare ADCY3 loss-of-function variants among individuals with type 2 diabetes in trans-ancestry cohorts. These findings provide new information on disease etiology relevant for future treatment strategies.

Identification of novel high-impact recessively inherited type 2 diabetes risk variants in the Greenlandic population

Aims/hypothesis: In a recent study using a standard additive genetic model, we identified a TBC1D4 loss-of-function variant with a large recessive impact on risk of type 2 diabetes in Greenlanders. The aim of the current study was to identify additional genetic variation underlying type 2 diabetes using a recessive genetic model, thereby increasing the power to detect variants with recessive effects.

Methods: We investigated three cohorts of Greenlanders (B99, n = 1401; IHIT, n = 3115; and BBH, n = 547), which were genotyped using Illumina MetaboChip. Of the 4674 genotyped individuals passing quality control, 4648 had phenotype data available, and type 2 diabetes association analyses were performed for 317 individuals with type 2 diabetes and 2631 participants with normal glucose tolerance. Statistical association

analyses were performed using a linear mixed model.

Results: Using a recessive genetic model, we identified two novel loci associated with type 2 diabetes in Greenlanders, namely rs870992 in ITGA1 on chromosome 5 (OR 2.79, $p = 1.8 \times 10^{-8}$), and rs16993330 upstream of LARGE1 on chromosome 22 (OR 3.52, $p = 1.3 \times 10^{-7}$). The LARGE1 variant did not reach the conventional threshold for genome-wide significance ($p 5 \times 10^{-8}$) but did withstand a study-wide Bonferroni-corrected significance threshold. Both variants were common in Greenlanders, with minor allele frequencies of 23% and 16%, respectively, and were estimated to have large recessive effects on risk of type 2 diabetes in Greenlanders, compared with additively inherited variants previously observed in European populations.

Conclusions/interpretation: We demonstrate the value of using a recessive genetic model in a historically small and isolated population to identify genetic risk variants. Our findings give new insights into the genetic architecture of type 2 diabetes, and further support the existence of high-effect genetic risk factors of potential clinical relevance, particularly in isolated populations.

Gonorrhoea in Greenland: geographic differences in diagnostic activity and incidence of gonorrhoea in 2015

For decades the spread of sexually transmitted infections (STIs) has been a health concern in Greenland, especially within the age group of 15–34 year olds. However, no overview exists of the potential differences in regional incidence and management of STIs. This study investigates the age, gender and region specific diagnostic activity and incidence of gonorrhoea in Greenland in 2015. The study design was an observational cross sectional register study with inclusion of patients tested for gonorrhoea in 2015. Patients above 15 years of age were included. Data was obtained from the laboratory system used at The Central Laboratory at Queen Ingrid's Hospital in Nuuk. We found, in 2015, a total of 17,911 tests for gonorrhoea were performed on both men and women. Women accounted for 68% of the tests, while men accounted for 32%. The positivity rate was 7,878 pr. 100,000 of which 56% were women and 44% were men. The regional distribution showed a disparity of the testing rate and the rate of positive gonorrhoea tests.. Thus, we have documented a high diagnostic activity and high incidence of gonorrhoea in Greenland in 2015 among both women and men. We also found significant regional differences in both diagnostic activity and gonorrhoea incidence.

Evidence-based nursing in Greenland: Pioneer spirit and long-term strategies for education and research

While healthcare in many Nordic countries is increasingly centralized, some nurses are working very much on their own. This applies to nurses in Greenland, who provide care for patients in some of the world's most rural and remote areas. Still, they share the same ambition of evidence-based care as their colleagues around the world.

Growth of children in Greenland exceeds the World Health Organization growth charts

Aim: Previous studies have found high rates of stunted linear growth in Greenlandic children. We measured growth patterns in Greenland and compared them with international growth charts.

Methods: The study cohort comprised 279 healthy children aged 6–10 years in 2012. They participated in two pregnancy and birth cohorts in Greenland and longitudinal growth data as birth was extracted from their medical records. Growth reference ranges were estimated with the lambda-mu-sigma (LMS) method and compared with growth charts from Denmark and the World Health Organization (WHO).

Results: The children's mean length, weight and head circumference were significantly larger than the WHO growth charts ($p < 0.001$). We found that 21–28% of the children aged zero to one years exceeded the WHO growth chart for length by more than two standard deviations. For weight and head circumference, 9–16% of the children aged 0–10 years and 9–11% of the children from zero to two years exceeded the WHO charts by more than two standard deviations. The Danish references were exceeded to a lesser degree.

Conclusion: This study showed that the growth of Greenlandic children up to 10 years was no longer stunted. Major determining factors suggested are genetic admixture, maternal overweight, changes in nutrition and improved health.

Whole blood mercury and the risk of cardiovascular disease among the Greenlandic population

Background: Studies have found mercury to be associated with cardiovascular disease (CVD), however, primarily in populations with low exposure. The highest levels, and variations in the levels, of whole blood mercury (WBM) worldwide have been found in Greenland. We prospectively assessed the association between WBM and the risk of developing CVD in the Greenlandic population.

Methods: We assessed the effects of WBM levels on incident CVD among 3083 Greenlandic Inuit, participating in a population-based cohort study conducted from 2005 to 2010. WBM was measured at baseline. Participants were followed in the National Patient Registries for Denmark and Greenland and in the causes of death register for CVD events from inclusion in the study until CVD event, emigration, death or end of follow-up (30/9–2013). Using Cox regression analyses, we calculated the incidence rates and the hazard ratio of CVD events according to WBM levels. Potential interactions with sex were also investigated.

Results: The highest levels of WBM were found in men, who had a significantly higher median level (19 $\mu\text{g/L}$ (IQR:1–44)), compared with women (15 $\mu\text{g/L}$ (IQR: 1–32), ($p < 0.001$)). The crude hazard ratio (HR) for incident CVD was 1.00 (95% CI 1.00–1.00) for 5 $\mu\text{g/L}$ increase in WBM. After adjusting for several potential confounders, there was still no association between WBM and incident CVD (HR 0.99; 95%CI:0.99–1.00). We found no interactions with sex.

Conclusions: In a population with high levels of WBM, we found no association between WBM and the risk of

developing CVD in Greenland.

Improved survival of head and neck cancer patients in Greenland

Previously, head and neck cancer (HNC) patients in Greenland have had significant diagnostic delay and poor survival rates. From 2005–2009 several initiatives have been made to ensure faster diagnosis and better survival. The aim of this study was to compare the prognosis before and after these initiatives were introduced.

All Greenlandic patients diagnosed with HNC between 2005 and 2012 were included. Data were retrieved from medical records and national databases and compared with the period 1994–2003.

A total of 98 patients were identified. Diagnostic delay was significantly lower compared to the period 1994–2004 ($p=0.048$). The 3-year overall survival was 56% for all HNC and 47% for nasopharyngeal carcinomas. We found that patients with HNC between 1994 and 2003 had a higher risk of death from all reasons compared with the period 2005–2012 (HR 2.17; CI 1.46–3.23) after adjustments for stage and diagnostic delay.

Patients with head HNC in Greenland from 2005–2012 were diagnosed earlier and had a better overall survival compared to the period 1994–2003. The change in survival is more likely to be due to improvement in treatment rather than the initiated interventions. Although survival has improved in Greenland, demographic problems and lack of specialists remain a challenge.

Prevalence of patients treated with anti-diabetic medicine in Greenland and Denmark. A cross-sectional register study

Diabetes mellitus is a large and growing worldwide health issue. Prior to this publication, a direct comparison of the prevalence of persons treated with anti-diabetic medicine in Greenland and Denmark has not been found. Therefore, the aim of this study is to estimate and compare the age- and gender-specific prevalence of patients treated with anti-diabetic medicine comparing Greenland and Denmark. The study was performed as a cross-sectional register study using data from population and medical registers in Greenland and Denmark. A total of 784 Greenlandic and 215,580 Danish patients treated with anti-diabetic medicine were included. The prevalence of patients aged 20–79 years treated with anti-diabetic medicine in Greenland was 2.6% (95% CI 2.4–2.8), much lower ($p 0.001$) compared to Denmark with 5.2% (95% CI 5.2–5.2). The difference was less pronounced after excluding those treated with insulin and women below 45 years treated with metformin. In conclusion, this study showed a lower prevalence of patients treated with anti-diabetic medicine in Greenland than Denmark. The main reason may be a much higher prevalence of undiagnosed diabetes in Greenland, particularly among the middle-aged. Differences in awareness of diabetes and access to continued primary healthcare may be contributing factors.

Contributions of mean and shape of blood pressure distribution to worldwide trends and variations in raised blood pressure: a pooled analysis of 1018 population-based measurement studies with 88.6 million participants

Background: Change in the prevalence of raised blood pressure could be due to both shifts in the entire distribution of blood pressure (representing the combined effects of public health interventions and secular trends) and changes in its high-blood-pressure tail (representing successful clinical interventions to control blood pressure in the hypertensive population). Our aim was to quantify the contributions of these two phenomena to the worldwide trends in the prevalence of raised blood pressure.

Methods: We pooled 1018 population-based studies with blood pressure measurements on 88.6 million participants from 1985 to 2016. We first calculated mean systolic blood pressure (SBP), mean diastolic blood pressure (DBP) and prevalence of raised blood pressure by sex and 10-year age group from 20–29 years to 70–79 years in each study, taking into account complex survey design and survey sample weights, where relevant. We used a linear mixed effect model to quantify the association between (probit-transformed) prevalence of raised blood pressure and age-group- and sex-specific mean blood pressure. We calculated the contributions of change in mean SBP and DBP, and of change in the prevalence-mean association, to the change in prevalence of raised blood pressure.

Results: In 2005–16, at the same level of population mean SBP and DBP, men and women in South Asia and in Central Asia, the Middle East and North Africa would have the highest prevalence of raised blood pressure, and men and women in the high-income Asia Pacific and high-income Western regions would have the lowest. In most region-sex-age groups where the prevalence of raised blood pressure declined, one half or more of the decline was due to the decline in mean blood pressure. Where prevalence of raised blood pressure has increased, the change was entirely driven by increasing mean blood pressure, offset partly by the change in the prevalence-mean association.

Conclusions: Change in mean blood pressure is the main driver of the worldwide change in the prevalence of raised blood pressure, but change in the high-blood-pressure tail of the distribution has also contributed to the change in prevalence, especially in older age groups.

Awareness of diabetes in the population of Greenland

Objective: Type 2 diabetes (T2D) may develop slowly with few symptoms and may remain undetected for many years, leading to severe complications that potentially could have been prevented with timely diagnosis and treatment. Undiagnosed diabetes has been reported high in Greenland. However, awareness and knowledges about diabetes in the general population remains unexplored.

Methods: This study was performed as an observational cross sectional study based on telephone interview among a random sample of Greenlanders. The interview was performed in Greenlandic or Danish according to participant' preference and included information about age, gender, place of birth, place of residence, medical history of diabetes, awareness of the diabetes, risk factors, symptoms, complications, and local possibilities to get tested for diabetes.

Results: In total, telephone contact was established with 196 adults. Of those, 161 participants completed the interview while 35 were unwilling to participate in the interview corresponding to a response rate of 82% (161/196). The majority of responders, 85.7%, were aware of diabetes and local testing possibilities. However, only around 65% were aware of risk factors of diabetes. Also, the knowledge about common symptoms of diabetes was quite low, around 50%, and in particular low, around 40%, among males and inhabitants in settlements.

Conclusions: The vast majority of the population was aware of diabetes. However, the present study revealed shortage of knowledge of common risk factors, symptoms, and complications to diabetes. This is challenging the effort to prevent diabetes and new alternative information strategies are needed. Furthermore, the shortage of knowledges of risk factors may not be isolated to diabetes and further studies on health literacy in Greenland are recommended.

Microvascular complications in Nuuk, Greenland, among Greenlanders and non-Greenlanders diagnosed with type 2 diabetes

Aim: The objective of this study was to estimate and compare between Greenlanders and non-Greenlanders living in Nuuk the proportion of patients with type 2 diabetes with microvascular complications.

Methods: This study was performed as a cross-sectional register study based on information in the Electronic Medical Record (EMR). All patients diagnosed with type 2 diabetes and with permanent addresses in Nuuk were included. Patients born in Greenland were considered to be Greenlanders, while patients born outside Greenland were considered as non-Greenlanders. Proportions of patients with retinopathy, microalbuminuria, nephropathy and neuropathy were estimated based on information from the EMR.

Results: A total of 393 patients (295 Greenlanders and 98 non-Greenlanders) were included. In total 83.0% of all patients have been screened for retinopathy, while 66.4% were screened for microalbuminuria and 64.6% for neuropathy within a two year period. The most frequent microvascular complication was neuropathy, which was observed among half (49.6%) of all patients followed by microalbuminuria (28.4%), retinopathy (10.7%) and nephropathy (7.3%). Retinopathy was observed among 21.4% of the non-Greenlanders compared to only 7.0% of the Greenlanders ($p = .001$). Microalbuminuria was also observed more frequently ($p = .047$) among non-Greenlanders (37.5%) than among Greenlanders (24.9%).

Conclusion: Greenlanders seem to be less prone to especially retinopathy than are non-Greenlanders.

Gestational diabetes and macrosomia among Greenlanders. Time to change diagnostic strategy?

Gestational diabetes mellitus (GDM) is a serious condition associated to both maternal and offspring complications. Yet, no globally accepted consensus exists on how to test and diagnose GDM. In Greenland, the clinical criteria for testing and diagnosing GDM are adapted from Danish guidelines. The aim of this study was to estimate the prevalence of GDM among Greenlanders using both the current clinical GDM criteria and the

recent WHO 2013 criteria and, further, to study the association between GDM, pre-pregnant overweight or obesity and macrosomia. A cross-sectional study of all 450 Greenlandic women who gave birth to a singleton in Nuuk within 1 year was performed. Based on an oral glucose tolerance test measuring capillary whole blood glucose, 119 women were categorised as having clinical GDM, WHO 2013 GDM or not GDM. Macrosomia defined as birth weight above 4,000 g was used as outcome variable. The prevalence of clinical GDM and WHO 2013 GDM was 0.4% (95% CI; 0–1.1) and 6.9% (95% CI; 4.5–9.2). WHO 2013 GDM, fasting blood glucose, pre-pregnant maternal overweight and obesity were associated with macrosomia. WHO 2013 GDM criteria were superior to clinical criteria in predicting macrosomia indicating that it may be time to consider the diagnostic strategy used in Greenland. Pre-pregnant overweight may also need more intensified lifestyle-intervention.

Validation of cardiovascular diagnoses in the Greenlandic Hospital Discharge Register for epidemiological use

Cardiovascular disease (CVD) is one of the leading causes of death worldwide. In Greenland, valid estimates of prevalence and incidence of CVD do not exist and can only be calculated if diagnoses of CVD in the Greenlandic Hospital Discharge Register (GHDR) are correct. Diagnoses of CVD in GHDR have not previously been validated specifically. The objective of the study was to validate diagnoses of CVD in GHDR. The study was conducted as a validation study with primary investigator comparing information in GHDR with information in medical records. Diagnoses in GHDR were considered correct and thus valid if they matched the diagnoses or the medical information in the medical records. A total of 432 online accessible medical records with a cardiovascular diagnosis according to GHDR from Queen Ingrid's Hospital from 2001 to 2013 (n=291) and from local health care centres from 2007 to 2013 (n=141) were reviewed. Ninety-nine and ninety-two percent of discharge diagnosis in GHDR from Queen Ingrid's Hospital and local health care centres were correct in comparison with diagnoses in the medical record indicating valid registration practice. The correctness of cardiovascular diagnoses in GHDR was considered high in terms of acceptable agreement between medical records and diagnoses in GHDR. Cardiovascular diagnoses are valid for epidemiological use.

Reproductive factors, lifestyle and dietary habits among pregnant women in Greenland: The ACCEPT sub-study 2013–2015

Background: During past decades the formerly active lifestyle in Greenland has become sedentary, and the intake of traditional food has gradually been replaced with imported food. These lifestyle and dietary habits may affect pregnant women. Aim: To describe age and regional differences in reproductive factors, lifestyle and diet among Greenlandic pregnant women in their first trimester. Methods: A cross-sectional study during 2013–2015 including 373 pregnant women was conducted in five Greenlandic regions (West, Disko Bay, South, North and East). Interview-based questionnaires on reproductive factors, lifestyle and dietary habits were compared in relation to two age groups (median age ≤ 28 years and > 28 years). Results: In total, 72.4% were Inuit, 46.6% had BMI > 25.0 kg/m², 29.0% were smoking during pregnancy and 54.6% had used hashish. BMI, educational level, personal income, previous pregnancies and planned breastfeeding period were significantly

higher in the age group >28 years of age compared to the age group ≤28 years of age. In region Disko Bay, 90.9% were Inuit, in region South more had a university degree (37.9%) and region East had the highest number of previous pregnancies, the highest number of smokers during pregnancy and the most frequent intake of sauce with hot meals and fast-food. Conclusions: Overall a high BMI and a high smoking frequency were found. Age differences were found for BMI and planned breastfeeding period, while regional differences were found for smoking and intake of sauce with hot meals and fast-food. Future recommendations aimed at pregnant women in Greenland should focus on these health issues.

Comparing health care workforce in circumpolar regions: patterns, trends and challenges

Background: The eight Arctic States exhibit substantial health disparities between their remote northernmost regions and the rest of the country. This study reports on the trends and patterns in the supply and distribution of physicians, dentists and nurses in these 8 countries and 25 regions and addresses issues of comparability, data gaps and policy implications.

Methods: We accessed publicly available databases and performed three types of comparisons: (1) among the 8 Arctic States; (2) within each Arctic State, between the northern regions and the rest of the country; (3) among the 25 northern regions. The unit of comparison was density of health workers per 100,000 inhabitants, and the means of three 5-year periods from 2000 to 2014 were computed.

Results: The Nordic countries consistently exceed North America in the density of all three categories of health professionals, whereas Russia reports the highest density of physicians but among the lowest in terms of dentists and nurses.

The largest disparities between “north” and “south” are observed in the Northwest Territories and Nunavut of Canada for physicians, and in Greenland for all three categories. The disparity is much less pronounced in the northern regions of Nordic countries, while Arctic Russia tends to be oversupplied in all categories.

Conclusions: Despite efforts and standardisation of definitions by international organisations such as OECD, it is difficult to obtain an accurate and comparable estimate of the health workforce even in the basic categories of physicians, dentists and nurses. The use of head counts is particularly problematic in jurisdictions that rely on short-term visiting staff. Comparing statistics also needs to take into account the health care system, especially where primary health care is nurse-based.

Cancer Incidence and Mortality in Greenland 1983–2014 – Including Comparison With the Other Nordic Countries

Background: During the last decades, social and life-style changes in Greenland have led to an increase in the incidence of several non-communicable diseases. Our aim is to present the cancer incidence and mortality in Greenland and compare the results with the other Nordic countries.

Methods: The data stems from The Danish Cancer Registry and The Danish Register of Causes of Death. Comparable data on cancer incidence and mortality in Denmark, Finland, Iceland, Norway, Sweden, and Greenland are available through collaboration between Nordic Cancer Registries (NORDCAN). We included all individuals residing in Greenland and diagnosed with or died of a cancer from 1983 to 2014.

Findings: The total number of cancer cases in Greenland for the study period was 4716 and there were 3231 cancer deaths. Respiratory and gastrointestinal cancers had the highest incidence as well as mortality in Greenland for the entire time period and for both sexes. Compared to the other Nordic countries, Greenland had significantly higher incidence and mortality rates for several cancers. Cancer of the lip, oral cavity, and pharynx, respiratory cancer, and cancer of unknown sites had the highest incidence rate ratios (2.3–3.9) and mortality rate ratios (2.7–9.9) for both sexes. The time trend from 1983 to 2014 showed a significant increase in cancer incidence in Greenland with nearly the same incidence level as the other Nordic countries. While the cancer mortality decreased in the other Nordic countries during the time period studied, there was no change in the cancer-specific mortality in Greenland.

Interpretations: The trends in cancer incidence and mortality in Greenland compared to the other Nordic countries have not been reported earlier. These data underline a need to focus on cancer-specific mortality in Greenland and prevention of high-incidence cancers related to well-established risk factors.

Prevalence of antibodies against *Brucella* spp. in West Greenland polar bears (*Ursus maritimus*) and East Greenland muskoxen (*Ovibos moschatus*)

Zoonotic infections transmitted from terrestrial and marine mammals to humans in European Arctic are of unknown significance, despite considerable potential for transmission due to local hunt and a rapidly changing environment. As an example, infection with *Brucella* bacteria may have significant impact on human health due

to consumption of raw meat or otherwise contact with tissues and fluids of infected game species such as muskoxen and polar bears. Here, we present serological results for Baffin Bay polar bears (*Ursus maritimus*) (n = 96) and North East Greenland muskoxen (*Ovibos moschatus*) (n = 32) for antibodies against *Brucella* spp. The analysis was a two-step trial initially using the Rose Bengal Test (RBT), followed by confirmative competitive enzyme-linked immunosorbent assays of RBT-positive samples. No muskoxen had antibodies against *Brucella* spp., while antibodies were detected in six polar bears (6.25%) rendering a seroprevalence in line with previous findings in other Arctic regions. Seropositivity was not related to sex, age or biometrics i.e. size and body condition. Whether *Brucella* spp. antibodies found in polar bears were due to either prey spill over or true recurrent *Brucella* spp. infections is unknown. Our results therefore highlight the importance of further research into the zoonotic aspects of *Brucella* spp. infections, and the impact on wildlife and human health in the Arctic region.

Study of correlation between the NAT2 phenotype and genotype status among Greenlandic Inuit

N-acetyltransferase 2 (NAT2) is the main enzyme metabolizing isoniazid and genotype-based treatment has been studied for years without becoming common practice. To investigate whether genotype-based isoniazid treatment is feasible in Greenland, we sequenced the coding sequence of NAT2 and determined the NAT2 enzyme-activity by caffeine test.

No additional genetic variants were identified in the coding sequence of NAT2, so that genotype status in 260 study participants could be assessed by a well-established 7-SNP panel. Studying the enzyme activity by the ratio of the two caffeine metabolites AFMU and 1X in 260 participants showed a high rate of slow phenotypes with intermediate or rapid genotype. These misclassifications were mainly observed in urine samples with pH3, we observed a moderate level of discrepancies (19 of the 116 individuals with intermediate or rapid genotype status having a slow phenotype). Further investigation showed that drinking coffee and not tea or cola was the most important factor for high levels of both metabolites.

The concordance between phenotype and genotype status with regard to slow metabolism supported the recommendation of lower isoniazid doses in individuals with slow genotype status in order to avoid liver injury, a frequent side effect. The phenotypical variation observed for individuals with intermediate or rapid genotype status warrants further research before increased dosing of isoniazid can be recommended.

Summary of available surveillance data on hepatitis C virus infection from eight Arctic countries, 2012 to 2014

We summarised available hepatitis C virus (HCV) surveillance data for 2012–14 from Arctic/sub-Arctic

countries/regions. We sent a HCV data collection template by email to public health authorities in all jurisdictions. Population statistics obtained from census sources for each country were used to estimate rates of reported acute and chronic/undifferentiated HCV cases. Seven countries with Arctic regions (Canada, Denmark, Finland, Greenland, Norway, Sweden and the United States, represented by the state of Alaska), including three Canadian territories and one province, as well as 11 Russian subnational Arctic regions, completed the data collection template. Data on acute HCV infection during 2014 was available from three Arctic countries and all Russian Arctic regions (rate range 0/100,000 population in Greenland, as well as Nenets and Chukotka Autonomous Okrugs (Russian subnational Arctic regions) to 3.7/100,000 in the Russian Republic of Komi). The rate of people with chronic/undifferentiated HCV infection in 2014 ranged from 0/100,000 in Greenland to 171.2/100,000 in Alaska. In most countries/regions, the majority of HCV-infected people were male and aged 19–64 years. Differences in surveillance methods preclude direct comparisons of HCV surveillance data between Arctic countries/regions. Our data can inform future efforts to develop standardised approaches to HCV surveillance in the Arctic countries/regions by identifying similarities/differences between the surveillance data collected.

Tuberculosis in the Circumpolar Region, 2006–2012

SETTING: The northern circumpolar jurisdictions Canada (Northwest Territories, Nunavik, Nunavut, Yukon), Finland, Greenland, Norway, Russian Federation (Arkhangelsk), Sweden and the United States (Alaska).

OBJECTIVE: To describe and compare demographic, clinical and laboratory characteristics, including drug resistance and treatment completion, of tuberculosis (TB) cases in the northern circumpolar populations.

DESIGN: Descriptive analysis of all active TB cases reported from 2006 to 2012 for incidence rate (IR), age and sex distribution, sputum smear and diagnostic site characteristics, drug resistance and treatment completion rates.

RESULTS: The annual IR of TB disease ranged from a low of 4.3 per 100 000 population in Northern Sweden to a high of 199.5/100 000 in Nunavik, QC, Canada. For all jurisdictions, IR was higher for males than for females. Yukon had the highest proportion of new cases compared with retreatment cases (96.6%). Alaska reported the highest percentage of laboratory-confirmed cases (87.4%). Smear-positive pulmonary cases ranged from 25.8% to 65.2%. Multidrug-resistant cases ranged from 0% (Northern Canada) to 46.3% (Arkhangelsk). Treatment outcome data, available up to 2011, demonstrated >80% treatment completion for four of the 10 jurisdictions.

CONCLUSION: TB remains a serious public health issue in the circumpolar regions. Surveillance data contribute toward a better understanding and improved control of TB in the north.

Enhancing Well-Being Among Older People in Greenland through Partnerships of Research, Practice and Civil Society

This article focuses on the methodology of the project Ageing in the Arctic (AgeArc) – Wellbeing, Quality of Life and Health Promotion among Older People in Greenland, and how the use of a collaborative approach aims at integrating ageing research, practices and policies to the benefit of the Greenlandic society. Thus, the aim of the article is to discuss how collaboration between research and practice can be an important factor in sustainable development of welfare solutions for older people in Greenland. In the project we study ageing policy, homecare, institutions, professional practices and municipal administration of these as well as older people's health, well-being, everyday life and historical perceptions of the roles of older people in Greenland. Moreover, researchers and municipalities collaborate on developing policies, initiatives within municipalities and civil society as well as creating network across the municipalities and between municipal administrations and civil society. In addition to this, we develop educational material for healthcare workers and professionals and work to create more public awareness about ageing in Greenland. We present three examples of our collaborative methods and discuss how the approach influences development and implementation of specific co-creation projects involving researchers, professionals and citizens on equal terms.

Begreber om rehabilitering

Under indtryk af en stigende andel af ældre i befolkningen er rehabilitering på vej til at blive en del af kommunernes tilbud. Ikke kun som en opgave for ergo- og fysioterapeuter, men som en tværfaglig opgave, også for det omsorgsfaglige personale. Denne artikel diskuterer forskellige tilgange til rehabilitering og deres konsekvenser for brugerne. Artiklen er en bearbejdning af et oplæg holdt på ICCH-konferencen i august i år og bygger på materiale fra et projekt om rehabilitering i hjemmeplejen i Nuuk, som blev gennemført i 2017.

Interspecific Gene Flow Shaped the Evolution of the Genus Canis

The evolutionary history of the wolf-like canids of the genus *Canis* has been heavily debated, especially regarding the number of distinct species and their relationships at the population and species level [1–6]. We assembled a dataset of 48 resequenced genomes spanning all members of the genus *Canis* except the black-backed and side-striped jackals, encompassing the global diversity of seven extant canid lineages. This includes eight new genomes, including the first resequenced Ethiopian wolf (*Canis simensis*), one dhole (*Cuon alpinus*), two East African hunting dogs (*Lycaon pictus*), two Eurasian golden jackals (*Canis aureus*), and two Middle Eastern gray wolves (*Canis lupus*). The relationships between the Ethiopian wolf, African golden wolf, and golden jackal were resolved. We highlight the role of interspecific hybridization in the evolution of this charismatic group. Specifically, we find gene flow between the ancestors of the dhole and African hunting dog and admixture between the gray wolf, coyote (*Canis latrans*), golden jackal, and African golden wolf. Additionally, we report gene flow from gray and Ethiopian wolves to the African golden wolf, suggesting that the African golden wolf originated through hybridization between these species. Finally, we hypothesize that coyotes and gray wolves carry genetic material derived from a “ghost” basal canid lineage.

Arctic Yearbook

A solid primary school is an important part of the foundation for creating a strong and sustainable society. Almost every country has undertaken school system reforms during the past two decades, but very few have succeeded in improving their systems from poor to fair to good to great to excellent (Mourshed et al., 2010). History, culture, and context matter for understanding applicability, if any, of one educational innovation over another. This can be said to have been the case in Greenland. One of the fundamental objectives after the introduction of Home Rule in 1979 was to adapt the Danish structures and systems to the Greenlandic conditions and culture. This article aims to analyze the Greenlandic education governance system and how the central level design, organizes and steers education systems across complex multilevel governance arrangements. In governing educational systems, how the central and the decentralized levels interact and communicate and how this affects trust, cooperation and negotiation of conflicts, and ultimately the outcomes of reform, will be discussed.

Genetic variations, exposure to persistent organic pollutants, and breast cancer risk: A Greenlandic case-control study

This study investigated the effects of single nucleotide polymorphisms (SNPs) in xenobiotic and steroid hormone-metabolizing genes in relation to breast cancer risk and explored possible effect modifications on persistent organic pollutants (POPs) and breast cancer associations. The study also assessed effects of Greenlandic BRCA1 founder mutations. Greenlandic Inuit women (77 cases and 84 controls) were included. We determined two founder mutations in BRCA1: Cys39Gly (rs80357164) and 4684delCC, and five SNPs in xenobiotic and oestrogen-metabolizing genes: CYP17A1 -34T>C (rs743572), CYP19A1 *19C>T (rs10046), CYP1A1 Ile462Val (rs1048943), CYP1B Leu432Val (rs1056836) and COMT Val158Met (rs4680). We used chi-square test for comparison of categorical variables between groups. Odds ratio (OR) estimates with 95% confidence interval (95%CI) were obtained using logistic regression models. The variant allele of BRCA1 Cys39Gly increased breast cancer risk (Gly/Cys versus Cys/Cys, OR: 12.2, 95%CI: 1.53; 98.1), and carriers of the variant allele of CYP17A1 -34T>C had reduced risk (CT+CC versus TT, OR: 0.44, 95%CI: 0.21; 0.93). CYP17A1 -34T>C was an effect modifier on the association between perfluoroalkyl acids (PFAAs) and breast cancer risk (Σ PFAA, ratio of OR: 0.18, 95%CI: 0.03; 0.97). Non-significant modifying tendencies were seen for the other SNPs on the effect of polychlorinated biphenyls, organochlorine pesticides and PFAAs. In summary, the BRCA1 Cys39Gly and CYP17A1 -34T>C genetic variations were associated with breast cancer risk. Our results indicate that the evaluated genetic variants modify the effects of POP exposure on breast cancer risk; however, further studies are needed to document the data from the relatively small sample size.

Persistent organic pollutants and hematological markers in Greenlandic pregnant women: The ACCEPT sub-study

The Arctic populations have high blood concentrations of persistent organic pollutants (POPs). Exposure to POPs was related to adverse health effects e.g. immune, neurological and reproductive systems. This study investigates associations between serum POP levels and haematological markers in Greenlandic pregnant women. This cross-sectional study included 189 women enrolled in 2010–2011 at the Greenlandic West coast by the inclusion criteria ≥ 18 years of age and had lived for 50% or more of their life in Greenland. The associations between the sum of the POP variables polychlorinated biphenyls (sumPCBs), organochlorine pesticides (sumOCPs), perfluoroalkylated substances (sumPFASs) and 24 haematological markers were analysed using linear regression adjusted for age, pre-pregnancy BMI, parity, gestation week, plasma-cotinine and alcohol intake. It showed a significantly inverse association between several haematological markers (eosinophil, lymphocyte, neutrophil and white blood cells) and sumPCBs, sumOCPs and sumPFASs. In addition, the monocyte, mean corpuscular haemoglobin concentration, plateletcrit and platelet count markers were significantly inversely associated with sumPFASs, but the haematocrit and mean erythrocyte corpuscular volume were positively associated with sumPFASs. In conclusion, exposure to POPs influenced several haematological markers, especially cell count parameters, suggesting immunosuppressive potential of POPs in Greenlandic pregnant women. The data need further investigations.

Hvem bestemmer, hvad der skal stå i avisen

»Avisen er uafhængig af politiske og økonomiske særinteresser« står der ofte i Sermitsiaq og AG's tillægsaviser. Alligevel kan virksomheder og myndigheder betale for at bestemme, hvad journalisterne skal skrive i dem. I resten af avisen skal selv samme journalister forholde sig kritisk til samme virksomheder. Formår de det?

How three key factors are driving and challenging implementation of renewable energy systems in remote Arctic communities

Challenges related to access and supply of fossil fuel generated energy in Arctic communities, together with a global agenda to fight the climate change, including through promoting renewable energy systems as alternatives to fossil fuels, are motivating implementation of renewables in the Arctic Region, as in the rest of the world. Various benefits are anticipated in relation to implementation of renewables in Arctic communities, a

fact that is driving interest in an appraisal of the state of energy production in the Arctic toward a transition from fossil fuel generated electricity and heating, to an Arctic energy system based on renewable energy sources. To understand and promote the potential for increased implementation of renewable energy solutions, it is important to investigate the role of key factors such as the economy, infrastructure and technology for the transition process. This article is based on an explorative study and analysis of how these three key factors are driving and challenging implementation of renewables. It aims at contributing to the debate on how to promote renewables in the four Arctic areas: Alaska, Canadian Arctic, Greenland and Russian Arctic. Key findings are discussed and recommendations to tackle some of the identified challenges are provided.

50 år med socialadministration og socialfaglighed – del 1

I år har Grønland haft en central socialadministration i 50 år. Den blev et historisk vendepunkt for indførelsen af en mere systematisk social forsyning. Denne artikelserie, som er delt i to, beskæftiger sig i den første del med forløbet op til etableringen af den sociale administration, og hvorfor det var så vigtigt at få dette bureaukratiske led i forsyningen. I Grønland havde man på daværende tidspunkt ikke en systematisk eller ligeligt fordelt social indsats, hvilket skulle sikres med en socialadministration. Der kastes også et historisk tilbageblik på de ministerielle og politiske overvejelser, der lå bag formålet med at oprette den tidlige socialfaglige indsats, som ledte frem til uddannelsen af de første grønlandske socialhjælpere i 1966. I anden del af artikelserien (Tidsskriftet Grønland 4, 2017) er fokus på tiden efter hjemmestyrets indførelse med socialreformkommissioner, socialforskning og nutidens BA-uddannede socialrådgivere.

Hjemløshed i Nuuk – et kritisk sociologisk- og planlægningsperspektiv

Homelessness in Nuuk is a social issue that has been known for several years. In the 1970s Nuuk got its first

shelter for women. In the 2010s some attention in the field has emerged with the establishment of a municipal night shelter and the opening of the Salvation Army day shelter and a Kofoeds Skole in Nuuk. Homelessness has not nearly gotten the same social policy focus as has children and their families. The lack of political attention to this topic is one of the reasons why there are yet large public planning challenges to be solved. In research based on prolonged fieldwork we can observe several challenges when homeless citizens try to engage with public agencies. The article draws on fieldwork and data from interviews in the field of social welfare and health care since 2010. A critical sociological perspective can create a new understanding of the challenges that lie in process of strengthening disempowered citizens' autonomy. The article brings excerpts from interviews regarding the direct experience of the encounter between disempowered citizens and public systems. It points to some solutions through an enhanced crosssectorial and communicative action. Public systems can, without losing function and power, hand over sovereignty to the citizens. Such efforts may in the long run create a more equal Greenlandic society.

"Vis mig dine fanger" - et indblik i Grønlands indsattepopulation

I 2018 får Grønland sin første lukkede anstalt, og med dette bliver Grønland som "landet uden fængsel" endeligt fortid. Allerede før det første lukkede anstalt slår dørene op, bringer landet sig ind på en førende plads, som det mest straffende land i Skandinavien.

På baggrund af journalstudier giver artiklen et indtryk af sociale kendetegn ved den grønlandske fangebefolkning. Ligesom det analyseres, hvorledes det grønlandske velfærdssamfunds håndterer den del af befolkningen som anbringes i anstalterne.

Robin Hood i samfundstjeneste - de første erfaringer med den grønlandske samfundstjenestedom

1st of January 2010 a new Greenlandic criminal code came in to force. The new criminal code also opened for a brand new sanction; community service, which never had been used in the Greenlandic society. The paper will describe the purpose of community service, the elements which make the sanction specific attractive in a Greenlandic context, and enforcement of the sanction in practice. Furthermore the paper will present results

from a qualitative study about the first experiences with community service in Greenland.

Island Autonomies - Constitutional and Political Developments

This chapter elucidates the Nordic islands: the Åland Islands, Faroe Islands and Greenland in comparison with the Portuguese autonomous islands of Azores and Madeira. The questions answered are what kind of constitutional and political development these island autonomies have been encountering and what their characteristic features are regarding their relationship with their respective metropolitan state.

Patientperspektiver: Oplevelser af professionel praksis eller håndtering af eget liv?

Ligesom i Europa og andre dele af den vestlige verden er brugerinddragelse kommet på dagsordenen i det grønlandske sundhedsvæsen. Det kræver, at den grønlandske sundhedsforskning suppleres med humanistiske tilgange, som kan udforske patientperspektiver. Humanistisk sundhedsforskning rummer forskellige teoretiske tilgange. Artiklen diskuterer en fænomenologisk tilgang, som er udbredt i humanistisk sundhedsforskning, og dens muligheder og begrænsninger i forhold til at inddrage patientperspektiver som rationel viden og patienter som subjekter for deres eget liv. Diskussionen relateres til et grønlandsk forskningsprojekt med en kritisk psykologisk tilgang, og hvad tilgangen kan tilføre nøglebegreber i humanistisk sundhedsforskning som kontekst, situation, forståelse og etik. Samtidig peges på udviklingsmuligheder i praksis.

Was Colonialism Fiscally Sustainable? An Empirical Examination of the Colonial Finances of Spanish America

This paper examines the long-run fiscal sustainability of the colonial finances of Spanish America. Using econometric tests of intertemporal stability and a macroeconomic budget constraint framework, the analysis revisits how the long-run fiscal dynamics of the colonial treasuries adjusted for inflation changed over time. Findings suggest that in spite of historical breakpoints associated to major financial difficulties during wartime, in general the treasuries achieved sustainable fiscal balances. However, there was a shifting pattern of fiscal sustainability between the treasuries across the colonial period.

Did structural change account for productivity growth within manufacturing during the import substitution era? A historical appraisal of Mexico, Argentina, and Brazil

The long-term productivity dynamics of Latin America have been the focus of vast research looking to understand the origins of the growth underperformance of the region. Based on new estimates from official industrial censuses from 1935 to 1975, this paper reassesses whether there was a process of structural change within the manufacturing industries of Mexico, Argentina, and Brazil. It presents a quantitative reassessment of the dynamics of productivity in these industries providing a new decomposition of labor productivity growth at a more disaggregated level. The overall results from a shift-share analysis are unable to find substantial evidence of structural change within manufacturing in these countries over the period.

Patient involvement in healthcare professional practice – a question about knowledge

The concept of patient involvement is ambiguous and contested in the healthcare systems in Western Europe and North America. Current research indicates that patients only feel moderately involved in their treatment and care. This article builds on a study of chronically ill patients' perspectives on healthcare practice in Greenland. It discusses the significance of including in healthcare practice knowledge of patients' everyday lives with illness and their own views on their situations. Research was qualitative and ethnographic. Participants were followed with participant observations and qualitative interviews for 2.5 years during hospital stay in the capital Nuuk and in their homes in towns and settlements during 2010–2013. Results show that patients are concerned about how to manage their life with illness on a daily basis. Their everyday life activities demonstrate the resources they have to live with illness. However, procedures for healthcare practice concentrate on treatment of the physical disease. Knowledge about psychosocial needs for care and rehabilitation tend to be excluded. The study points to potential for improving professional practice through healthcare professionals' active investigation of patients' everyday lives and values, integration of this knowledge into their professional practice and developing structures for this kind of involvement.

50 år med socialadministration og socialfaglighed: 2. del – socialpolitik, kommissioner og socialrådgivere med BA

Efter første artikels (TG 2/2017) fokus på Grønlands overtagelse af det socialt administrative område ser vi i denne anden del på nutidens forhold. Nutiden kommer til at handle overvejende om 1980'erne og 1990'erne. Store tiltag såsom den første socialreformkommission og en egentlig grønlandsk socialrådgiveruddannelse blev centrale faktorer i forståelsen af det socialpolitiske landskab. Sen-90'ernes sparetider og manglende socialpolitisk handlekraft skabte en stilstand, som kom til udtryk i et noget stillestående lovarbejde på det sociale område. 2000'erne handlede om at rette Grønland ind på sporet af et moderne velfærdssamfund blandt andet med en meget professionaliseret socialreformkommission. Her ses nye organisationer som MiO, men også en ny socialstyrelse og en revitaliseret socialrådgiverforening. Artiklen afrundes med en problematisering af de fortsatte sociale udfordringer samt bud på fremtidige løsninger.

Indledning - Om Psykologi i Grønland

Artiklen diskuteres, hvorledes psykologien i Grønland indgår i den generelle udvikling af samfundet, der er med i en rivende udvikling i Arktis, har en stor og produktiv kultur, og som samtidigt er præget af en stadig befolkningsvandring mod byerne og øget ulighed mellem rig og relativt fattig. Det vises, at rigtigt mange børn og unge trives og opnår uddannelse, men at der samtidigt er en del unge, der ikke opnår samme grad af adgang til basale rettigheder såsom tryghed, uddannelse og udviklingsmuligheder som andre. Det diskuteres, hvordan psykologien i høj grad følger udviklingen i de skandinaviske lande, men at den kunne omfatte mere community-baserede metoder for at kunne bidrage til forebyggelse af de sociale udfordringer, der skaber baggrund for mental traumatisering og mistro. Behovet for en social forskning, der rummer løsninger og ikke blot beskrivelser af velkendte sociale udfordringer, påpeges og diskuteres.

"De Søger Trygheden" - Kvinder Ramt af Hjemløshed i Nuuk

Artiklen tager afsæt i et feministisk perspektiv på kvinder, som er ramt af hjemløshed. Med afsæt i et litteraturstudie og en inspiration fra nordcanadisk forskning i hjemløshed blandt kvinder analyseres situationen i Nuuk. Vi inddrager empiri fra et længerevarende feltarbejde i Nuuk og med interviews omkring kvindernes situation fra kilder i miljøet. I artiklen problematiseres det, at det offentlige sociale system forekommer meget lidt forberedt på, at Nuuk i dag har over 200 borgere, som er ramt af hjemløshed. Der eksisterer ikke indtil i dag et særskilt fokus på kvinderne i denne situation. Kvinder er blandt andet omfattet af begrebet "skjult hjemløshed", som hidtil har været anvendt i begrænset omfang i den offentlige debat. I artiklen viser vi blandt andet, at man dels har kendt til hjemløshed i flere årtier – også til kvindernes hjemløshed. Kvindernes manglende stemme i socialpolitikken kan hænge sammen med, at kvindekampen i Grønland er gået lidt i dvale. Artiklen afrundes med strategiforslag til en mulig videre proces med inspiration fra nordcanadiske tiltag.

Homelessness across Alaska, the Canadian North and Greenland: A Review of the Literature on a Developing Social Phenomenon in the Circumpolar North

Over the past three decades, homelessness has become an area of significant social concern in Alaska, the Canadian North, and most recently, Greenland. These three geographical contexts show both similarities and contrasts, but no effort has yet been made to review the research literature on homelessness from these three regions or to highlight key themes or gaps in current knowledge. We reviewed the literature in order to 1) understand the current state of knowledge of the dynamics of homelessness in Alaska, the Canadian North (here including Yukon, Northwest Territories, and Nunavut), and Greenland and 2) conceptualize a northern geography of homelessness. The research literature identifies common themes across these contexts, which include chronic housing insecurity, overrepresentation of Indigenous peoples among those living homeless, and the significance of gendered experiences of homelessness. It identifies key interconnections between hidden homelessness and visible homelessness as the dynamics of urbanization in northern towns and cities reveal the social consequences of chronic housing insecurity in settlements. Across these northern regions, the high rates of chronic homelessness reflect the prevalence of northern housing insecurity and the lack of both adequate, appropriate support for people experiencing mental health or addiction problems and supportive or

public housing options. Strategies that aim to diversify housing stock at various critical points along the housing spectrum are needed in northern regions, an idea that is promoted by Housing First and transitional housing programs in Alaska and the Canadian North.

Rehabilitering i hverdagslivet: Borgerperspektiver på livet som gammel – muligheder og udfordringer i den faglige støtte

Rapporten formidler resultaterne af en undersøgelse af hverdagsrehabilitering i Kommuneqarfik Sermersooq, Forvaltningen for Arbejdsmarked og Velfærd, Ældreområdet og Voksenomsorgsservice. Hverdagsrehabiliteringskonceptet er overtaget fra Danmark, og som i Danmark er praksis udtryk for en instrumentel og fragmenteret tilgang til støtten til ældre og kronisk syge, dvs et ensidigt fokus på fysisk træning og ADL. Dette fokus er dikteret af økonomiske overvejelser. Indsigten i borgernes perspektiver på livet som ældre/kronisk syg viser, at mål for støtten må forholde sig til ældres behov og ønsker i forhold til et meningsfuldt liv i fællesskab med andre. Hjemmehjælpergruppen, som skal være den bærende kraft i hverdagsrehabilitering, har gode muligheder for at inddrage borgernes perspektiver i indsatserne, men det kræver en professionalisering af hjemmehjælpernes opsøgen af borgernes perspektiver, og det kræver et opgør med en hierarkisk vidensopfattelse blandt de forskellige faggrupper i hjemmeplejen. I et udbredt problem blandt ældre/kronisk syge, nemlig ensomhed og perspektivløshed, diskuteres muligheder for relevante og meningsfulde aktiviteter, der muliggør ældres deltagelse som synlige og bidragende medlemmer af lokalsamfundet (ikke publiceret).

Autonomy in Denmark: Greenland and the Faroe Islands

Greenland and the Faroes are autonomous jurisdictions within the Danish Realm, having undertaken a continuous process of extended self-determination in the post-WWII era. In both jurisdictions there are strong movements of secession and counter-secession, whose respective strengths are largely achieved through external relations. This paper will first provide an introduction to the historical background and the formal relationship between the two jurisdictions and their metropolitan state. We will then extend the two cases with a description of how increased internal autonomy has evolved in a dynamic interaction with changes in international affairs. Whether the two jurisdictions may move towards full secession or new forms of unity is difficult to predict, but external relations keep on pushing at the formal structures and limits of the realm, which we will briefly reflect upon in the final section.

Familieklasser i Nuuk - en problemopløsende praksis

Kapitlet undersøger og diskuterer virksomme processer i familieklasserne i Nuuk og peger især på tryghed, dialog, kollektiv læring, ligeværd og fælles refleksion - samt lyst og fælles latter - som problemopløsende udviklingsveje.

Familieklasser i Nuuk - at skabe fredelige løsninger midt i skolen

I artiklen beskrive forældres fortællinger om deres og deres barns deltagelse i familieklassen i Kangillinguit Atuarfiat I Nuussuaq i Nuuk. Vores formål her er at forstå, hvordan forældrene oplever deltagelse i familieklassen. Igennem kvalitative interviews fortæller forældrene om dette. Deres fortællinger viser, at de var glade for at deltage i familieklassen – og at det, de værdsatte, og som de fandt hjælpsomt i at støtte deres barn i skolen og i hjemmet, var: social støtte og gensidig anerkendelse i form af (1) Genkendelighed, dvs. at kunne se ligheder imellem familierne; (2) Ikke at føle sig alene, idet man føler sig forstået som forældre; (3) Fællesskabsfølelse gennem åbenhed om udfordringer og løsninger og gennem at opmuntre, rose, støtte og bakke hinanden op samt ved at kunne have det sjovt sammen; (4) Erfaringsdeling, der giver inspiration til sammen at finde løsninger samt gennem at give og lytte til hinandens råd og ideer; (5) Spejling ved at kunne se sig selv med andres øjne helt konkret; (6) Refleksivitet ved at tale om og vise forskellige løsninger og forståelser forældrene og forældre og børn imellem; (8) Snakke sammen (tale med hinanden, tiltro og accept, åbenhed); (9) Lytning (nærhed); (10) At rose og at blive rost (være anerkendende i hverdagen og have tiltro til barnet); (11) Accept; (12) Åbenhed; (13) Ro; (14) Selvtillid. Den fælles læring handler om at finde gode løsninger sammen igennem aktiviteter, der udføres sammen i klassen og derefter reflekteres over – ligeledes – i en fælles proces.

Man skal kunne se glæden – familieklassen i Nuuk: tryghed, åbenhed og fælles læring

I denne artikel undersøger vi familieklassen som metode i Kalaallit Nunaat (Grønland) som en mulighed for at støtte og styrke børn til at trives i skolen. Vi gør dette ved at fremlægge og analysere familieklasselærerens fortælling om familieklassen, idet netop den professionelle fortælling ses som særdeles betydningsfuld i forståelsen af, hvilke processer, der gør at familieklassen når gode resultater mht. de deltagende familiers oplevelse af barnets trivsel i skolen. Endvidere sammenligner vi familieklasselærerens og forældrenes fortællinger og diskuterer disse i forhold til den særlige kulturelle kontekst, som familieklassemetoden anvendes i. Resultaterne er, at familieklasselæreren beskriver, at det gennem fælles oplevelser, anerkendelse, fælles refleksion, succesoplevelser, tryghed og glæde er muligt at skabe nye valgmuligheder og løsninger i og

overfor tidligere gentagende, problemfokuserede adfærdsmønstre. Forældre og familieklasselærer peger sammen på, at det virksomme i familieklassen er, at der skabes et rum, hvor deltagerne (1) ikke føler sig alene og forkerte, men som forældre med muligheder, hvorved der skabes håb og handlemuligheder; (2) skaber glæde sammen og derved oplever at have ressourcer og muligheder; (3) kan se sig selv med andre(s) øjne og derved skabe nye fortællinger om familien og barnet; (4) kan dele erfaringer med hinanden både verbalt og i praksis; (5) anerkender og bliver anerkendt gensidigt; (5) bygger selvtillid i familien gennem succesoplevelser i klassen og i familien; (6) i praksis styrker åbenhed ved i praksis at skabe trygge rammer at udtrykke sig i; og (7) lærer ved at være sammen med andre, dvs. ved at indgå i en fælles læringsproces, hvor alles bidrag har værdi.

Social resiliens: forandringsressourcer i to byer i Grønland

Vi starter ud med at give en oversigt over aktuel teori om resiliens og viser, at disse teorier peger på, at resiliens handler om netværk og forbindelser i komplekse systemer. Derefter beskriver vi fortællinger om social resiliens i to byer i Grønland, Nanortalik og Tasiilaq. Ud fra de beskrivelser diskuterer vi, hvad der kendetegner social resiliens i Grønland og hvordan det kan fremmes gennem konkrete projekter båret af lokale kræfter som et bidrag til den stærke og innovative kultur, der i disse år udvikler sig i Grønland som en del af den globale verden.

Social resiliens i Nanortalik

Artikel handler om social resiliens blandt unge i Nanortalik. Dette undersøges dels gennem en spørgeskemaundersøgelse og dels gennem interviews. Denne artikel fokuserer på spørgeskemaundersøgelsen. Formålet med undersøgelsen er at pege på områder i de unges liv, som med fordel kan styrkes for at øge trivsel og fælles styrke til at forebygge, møde og komme sig over modgang i livet. Det sidste er det, vi her kalder social resiliens. Seks klasser deltog i spørgeskema undersøgelsen (8.- 10. klasse samt Majoriaq). Det blev til 68 udfyldte spørgeskemaer. Samlet set viser resultaterne, at omkring 20 % af de unge aldrig eller sjældent er tilfredse med sig selv og ligeledes omkring 20 % føler sig aldrig eller sjældent glade. Cirka 20 % svarer, at de aldrig eller sjældent føler sig rolige. Vi så endvidere, at kun lidt over halvdelen af de unge har nogle som de ofte eller altid kan betro sig til samt at de kan have svært ved at slappe af sammen med andre. De unge mener selv at respekt for hinanden, tryghed og er de vigtigste værdier for dem – sammen med kærlighed til børn og samarbejde. De mener også, at der generelt er tillid, tryghed og respekt i lokalsamfundet, men især respekt og tryghed ligger lidt lavere i lokalsamfundet end i de unges egne værdier. Undersøgelsen peger på, at der generelt er en høj grad af trivsel og social resiliens blandt unge, men at det er vigtigt at styrke dette, således at

det omfatter alle unge og ikke blot 4 ud af 5. Denne styrkelse kan tage afsæt i det høje niveau for tillid, respekt og sikkerhed/tryghed, som lokalsamfundet ifølge de unge allerede rummer i høj grad. Man kan fokusere på at være endnu mere respektfuld og tillidsfulde og derved skabe endnu flere områder med tryghed for alle.

Syv forundringer over resiliensbegrebet

Der præsenteres syv forundringer over resiliensbegrebet og peges på muligheden for at udvikle et begreb om social resiliens i stedet for blot den individuelle resiliens, der adskiller mennesker i stedet for at bygge socialt bæredygtige resiliente netværk. Der gives konkrete eksempler på det sidste - fra Mexico og fra Grønland.

Unge fortællinger om resiliens i Nanortalik

I artiklen præsenteres og diskuteres resultaterne af en kvalitativ, semistruktureret interview undersøgelse af 10 unges fortællinger om sociale relationer, værdier og trivsel, men med et særligt fokus på resiliens ved at spørge ind til, hvordan informanterne selv og/eller personer, som de kender, har mødt modgang i livet. Alderen på de interviewede er mellem 14 og 18 år med et gennemsnit på 16,2 år. Resultaterne er, at de unge ser social støtte i form af samvær og dialog som ressourcegivende. Alle informanterne snakker om samvær som nøglen til deres glæde. Næsten alle informanterne nævner dialog som en god problemløsningsmåde. Dialog og samvær er derved redskaber til at fremme resiliens. Man kan endog argumentere for, at de er resilien. De er endvidere social resiliens, fordi de omfatter flere end én person – ofte mange – og kun kan skabes af flere sammen. Død, alkoholisme, vold, tab og kedsomhed bliver nævnt som de former for modgang i livet, som de unge har mødt. De unge foreslår en række aktive løsninger, der både kan forebygge modgang i livet og som kan hjælpe til at komme sig over modgang. Disse løsninger omfatter fire kategorier: (1) godt forældreskab, der skaber trygge rammer for børnene, idet det åbner for dialog, tillid til at tale med hinanden og gensidig respekt, (2) generelle værdier og holdninger, der lægger vægt på især kærlighed, omsorg, tryghed, respekt, accept af hinanden, glæde og tillid til både andre og sig selv, (3) flere muligheder for fælles aktiviteter i lokalsamfundet i form af sport, arbejdspladser.

Reproductive factors, lifestyle and dietary habits among pregnant women in Greenland

Background: During past decades the formerly active lifestyle in Greenland has become sedentary, and the intake of traditional food has gradually been replaced with imported food. These lifestyle and dietary habits may affect pregnant women. Aim: To describe age and regional differences in reproductive factors, lifestyle and diet among Greenlandic pregnant women in their first trimester. Methods: A cross-sectional study during 2013–2015 including 373 pregnant women was conducted in five Greenlandic regions (West, Disko Bay, South, North and East). Interview-based questionnaires on reproductive factors, lifestyle and dietary habits were compared in relation to two age groups (median age ≤ 28 years and > 28 years). Results: In total, 72.4% were Inuit, 46.6% had BMI > 25.0 kg/m², 29.0% were smoking during pregnancy and 54.6% had used hashish. BMI, educational level, personal income, previous pregnancies and planned breastfeeding period were significantly higher in the age group > 28 years of age compared to the age group ≤ 28 years of age. In region Disko Bay, 90.9% were Inuit, in region South more had a university degree (37.9%) and region East had the highest number of previous pregnancies, the highest number of smokers during pregnancy and the most frequent intake of sauce with hot meals and fast-food. Conclusions: Overall a high BMI and a high smoking frequency were found. Age differences were found for BMI and planned breastfeeding period, while regional differences were found for smoking and intake of sauce with hot meals and fast-food. Future recommendations aimed at pregnant women in Greenland should focus on these health issues.

Contamination of the Arctic reflected in microbial metagenomes from the Greenland ice sheet

Globally emitted contaminants accumulate in the Arctic and are stored in the frozen environments of the cryosphere. Climate change influences the release of these contaminants through elevated melt rates, resulting in increased contamination locally. Our understanding of how biological processes interact with contamination in the Arctic is limited. Through shotgun metagenomic data and binned genomes from metagenomes we show that microbial communities, sampled from multiple surface ice locations on the Greenland ice sheet, have the potential for resistance to and degradation of contaminants. The microbial potential to degrade anthropogenic contaminants, such as toxic and persistent polychlorinated biphenyls, was found to be spatially variable and not limited to regions close to human activities. Binned genomes showed close resemblance to microorganisms isolated from contaminated habitats. These results indicate that, from a microbiological perspective, the Greenland ice sheet cannot be seen as a pristine environment.

Patientperspektiver: Ikke kun 'præferencer', men en vidensform

Forskning i patienters daglige livsførelse med sygdom viser hvordan patienter bliver udelukket fra indflydelse på egen behandling, pleje og rehabilitering, fordi professionelle er centreret omkring deres egen faglige praksis og vurderer faglig viden højere end patienters viden om deres liv. I det, der i sundhedsvæsenet kaldes 'fælles beslutningstagen', er det ikke nok at spørge til patienters umiddelbare præferencer i forhold til en

bestemt indsats. Patienters sundhedsproblemer må forstås i relation til deres liv, som er formet i bestemte sociale og kulturelle sammenhænge, og som rummer ressourcer til at klare livet med sygdom. Denne viden kan sætte de professionelle i stand til at yde en indsats, som er relevant og brugbar for den enkelte patient. På den måde går kvalitet i sundhedsvæsenet og en medmenneskelig tilgang til patienterne hånd i hånd.

Research | Forskning > PhD thesis | Ph.d.-afhandling

Mediespejlet - kvantitative og kvalitative undersøgelser over 12 - 25 årige unges liv med medier i grønlandske byer 1996 - 2016: Ittoqqortoormiit, Tasiilaq, Aasiaat, Upernavik, Sisimiut, Qaqortoq & Nuuk

Nysgerrighed omkring børn og unges fritids- og medievaner i et Grønland, hvor ikke engang hovedstaden Nuuk i midten af 1990'erne havde en biograf og hvor cafeer, ungdomsklubber og andre af de unges fritidssteder var begrænsede, fik mig til at spekulere over, hvad de unge egentlig lavede i deres fritid. Der var selvfølgelig sportshaller og mange muligheder for udendørs aktiviteter afhængig af årstiden, men var det også medierne, der fyldte fritiden ud for de unge i Grønland? Og hvis ja, så med hvad?

Eftersom medieforskning om unge i Grønland i 90'erne nærmest var ikke-eksisterende, måtte der startes fra bunden. Med basis i humaniora blev inspirationen fra grounded theory (Glaser & Strauss, 1965) og induktiv forskning et startpunkt for en bred interesse for empiriske data om unges medievaner. Baseret først på "convenience" etnografiske observationer (Bryman, 2012: 201-202) i hjembyen Nuuk, der kunne danne grundlag for relevante spørgsmål til et spørgeskema, blev det første kvantitative pilotprojekt omkring børn og unges medievaner distribueret i papirform til skoler i Nuuk i 1996. Inspiration fra andre landes medie-ungdomsforskning og især fra forskningsprojektet BUM (Børn, Unge og Medier, finansieret fra NorFa fra 1997-1999) i Danmark, som jeg blev tilknyttet, gjorde en bred deduktiv teoridannelse om unge og medier til et sæt løse formodninger om de unges medieliv, snarere en end egentligt hypotese, der skulle testes, som det ofte er tilfælde i kvantitativ forskning (Bryman, 2012: 161). Hensigten var hurtigt at få en bred kortlægning af fritidssituationen, især med henblik på mediebrug og -vaner.

Den første pilot-spørgeskemaundersøgelse i Nuuk blev startskuddet til flere spørgeskemaundersøgelser i 1997 og 2004 i papirform, og i 2015 som webbaseret survey i Relationswise. Alle disse spørgeskema-undersøgelser var landsdækkende.

Inspiration fra grounded theory om at se ungdomslivet fra så mange vinkler som muligt og for at skabe "rich-data" (Geertz, 2000), blev hurtigt til interessen for mixed methods og triangulering. I de følgende år kom derfor også indimellem kvalitative undersøgelser i 1997 og 2001 som opfølgning på spørgeskemaundersøgelserne og i 2000 en visuel antropologisk undersøgelse, der gentoges som undervisning i studenterprojekter i 2003 og 2006. Indimellem var mindre forskningsprojekter og forskning omkring film, medieforekomster som sociale medier og dele af ungdomskulturer – alle relaterede til undervisning på et lille universitet med få ansatte, der krævede stadig fornyelse for at de studerende kunne have valgmuligheder.

Metodemæssigt udviklede hele projektet: Mediespejlet: Medier, ungdom, identitet og globalisering i Grønland - kvantitative og kvalitative undersøgelser over 12-25-åriges liv med medier i grønlandske byer 1996-2016 sig i løbet af disse 20 år fra at være et projekt baseret på grounded theory over mixed methods (Tashakkori & Teddlie, 2010), triangulering (Denzin, 1970; Bryman, 2012), transgressive methods og post-feminisme (Lather, 1991, Staunæs & Petersen, 2000), indigenous methods (Denzin, Lincoln & Smith, 2008, Smith, 1999) til visuel antropologi (Pink, 2006; Mitchell, 2011; Rose, 2011). Det er denne både teoretiske og metodemæssige rejse,

som denne afhandling vil søge at dække med 17 artikler fordelt på de temaer der manifesterede sig i løbet af forskningen, som grounded theory dekreterer og som løbende blev til forskningsspørgsmål eller "kategorier" (Bryman, 2012: 570). Alle handlede de om unges mediebrug i bred forstand: Hvilke medier bruger de unge i deres hverdag? Hvad interesserer dem? Hvad er hovedudfordringen for de unge i relation til deres medieforbrug som for eksempel 'adgang'? Hvordan forsøger de at få så meget som muligt ud af deres medieliv/ungdomsliv, hvor end de end bor? Andre spørgsmål var: Hvordan bruger disse unge mennesker medier til at optimere deres identitet og deres livsvilkår som unge lokale i en globaliseret verden? Hvordan er deres hverdagsliv i urbane centre så vel som i små byer med hensyn til familieliv, ungdomsliv, medier og fritidsmuligheder?

Temaerne udmøntede sig til det, der nu, på basis af artiklerne, er blevet kapitler i denne afhandling: En visuel kultur i et globalt perspektiv (kapitel 4.1); KNR2 - Public service i Grønland (kapitel 5); Unge, medier og urbanisering og postkolonialisme (kapitel 6); Unge, medier og identitet (kapitel 7); Unge medier og globalisering (kapitel 8). Kapitlerne 1, 2 og 3 giver en Præsentation af afhandlingen og artiklerne (kapitel 1), af Børn, medier og socialisering (kapitel 2) og af Perspektiver på grønlandske byer (kapitel 3). Kapitel 4 beskriver Metodiske og videnskabsteoretiske refleksioner og endelig er kapitel 9 et forsøg på at trække de store linjer og give et overblik over Ungdom og medieforbrug fra 1996-2016.

Grønland har nu fået biografer, TV-situationen har bedret sig i byerne og Internettet i mange af de store byer har betydet et helt nyt liv: Muligheder for virkeligt at være globale unge, for at købe ting på nettet, som byerne ikke umiddelbart har på lager og muligheder for nu på afstand at holde kontakt med venner og familie som aldrig før med mobiltelefoner, iPads, face time, sociale medier og Skype, uanset en dyr og besværlig infrastruktur. Sådan er det mange steder! Som mine undersøgelser imidlertid vil vise er Grønland stadig et land præget af geografiske forskelle, som selv ikke en digital revolution endnu har udbedret – helt!

Arcticness insights

Climate change and globalisation are opening up the Arctic for exploitation by the world – or so we are told. But what about the views, interests, and needs of the peoples who live in the region? What about the myriad of other factors affecting the Arctic and its peoples? This book explores opportunities and limitations in engaging with the Arctic under change, and the Arctic peoples experiencing the change, through the lens of understanding Arcticness: what the Arctic means to Arctic peoples socially and physically. The chapters bring together a variety of disciplines, such as law, politics, geography and the arts, to examine what Arctic peoples could learn from and teach elsewhere, across disciplines and across locations. The authors reflect on philosophies of change in tandem with philosophies of the Arctic, particularly as represented by everyday experiences, memories and geographical imaginations.

Imagining the future: Local perceptions of Arctic extractive projects that didn't happen

External imaginings of the future Arctic range from protected wilderness to booming oil and gas province, and proponents of different visions frequently clash in global public arenas. At the same time, external perceptions, whether pro-development or pro-conservation, frequently fail to reflect the realities of living in the Arctic, or to incorporate the views (and imaginings) of local inhabitants – those most affected by Arctic resource projects. The Arctic region does have significant resource potential. The United States Geological Survey estimated that 25 per cent of the world's undiscovered petroleum reserves were to be found in the Arctic.¹ The Arctic also represents around 10 per cent of the global nickel, cobalt and tungsten markets, 26 per cent of diamond gem stones and up to 40 per cent of the global production of palladium.² Yet uncertainty about the viability of natural resource projects is ever-present. Companies may be highly visible and a project intensely debated long before it is clear whether natural resource deposits, national-level negotiations and global markets will result in actual extraction for the market. Often local communities have very little information available at this point and yet the very prospect of an industrial project can transform the way a local community imagines – and prepares for – its own future.

How three key factors are driving and challenging implementation of renewable energy systems in remote Arctic communities

Challenges related to access and supply of fossil fuel generated energy in Arctic communities, together with a global agenda to fight the climate change, including through promoting renewable energy systems as alternatives to fossil fuels, are motivating implementation of renewables in the Arctic Region, as in the rest of the world. Various benefits are anticipated in relation to implementation of renewables in Arctic communities, a fact that is driving interest in an appraisal of the state of energy production in the Arctic toward a transition from fossil fuel generated electricity and heating, to an Arctic energy system based on renewable energy sources. To understand and promote the potential for increased implementation of renewable energy solutions, it is important to investigate the role of key factors such as the economy, infrastructure and technology for the transition process. This article is based on an explorative study and analysis of how these three key factors are driving and challenging implementation of renewables. It aims at contributing to the debate on how to promote renewables in the four Arctic areas: Alaska, Canadian Arctic, Greenland and Russian Arctic. Key findings are discussed and recommendations to tackle some of the identified challenges are provided.

Indigenous Rights in the Marine Arctic

Global energy problems will remain a challenge in the coming decades. The impact of climate change and the melting of polar sea ice opening up access to offshore hydrocarbon resources in the Arctic Ocean, raises questions for both civil society and the scientific community over drilling opportunities in Arctic marine areas.

Disparities in approach to the governance of oil and gas extraction in the Arctic arise from fundamental differences in histories, cultures, domestic constraints and substantive values and attitudes in the Arctic coastal states and sub-states. Differing political systems, legal traditions and societal beliefs with regard to energy security and economic development, environmental protection, legitimacy of decision making, and the ownership and respect of the rights of indigenous people, all affect how governance systems of oil and gas extraction are designed.

Using a multidisciplinary approach and case studies from the USA, Norway, Russia, Canada, Greenland/Denmark and the EU, this book both examines the current governance of extraction and its effects and considers ways to enhance the efficiency of environmental management and public participation in this system.

Why cumulative impacts assessments of hydrocarbon activities in the Arctic fail to meet their purpose

The Arctic Region is characterised by vulnerable ecosystems and residing indigenous people, dependent on nature for subsistence fishing and hunting. The Arctic also contains a wealth of non-living natural resources such as minerals and hydrocarbons. Synergies between increased access and growing global demand for the Arctic resources influence the level and nature of human activity and its influence on the environment. It is therefore essential to assess and mitigate the cumulative impacts from these activities. Environmental Assessment (EA) is a common tool applied by the Arctic nations to secure that environmental considerations are included in decision-making when new plans and projects are implemented. However, recent research has indicated that assessment of cumulative impacts in EAs is inconsistent and the practices ambiguous. This article explores this phenomenon further by reviewing and analysing current practices of assessing cumulative impacts in EAs in relation to offshore oil and gas activities in the Arctic. It is found that cumulative impacts assessments are generally lacking. The practitioners involved explain this with reference to the challenge of addressing and assessing cumulative impacts due to their complex nature. They further point at lacking methodological guidelines as well as lack of resources during the impact assessment process.

Peripheral Visions: Engaging Nordic Literary Traditions on Orkney and Shetland

This article examines the reception of Old Norse literature and culture in the literatures of the Scottish islands of Orkney and Shetland. It compares in particular the work of Shetland author James John Haldane Burgess (1862-1927) and the Orcadian author George Mackay Brown (1921-1996) and it evaluates the ways in which these two figures use their geographically peripheral positions as unique vantage points from which to reframe Nordic identity in their writing. By re-orientating the Scottish Islands from the periphery of Britain to the centre of important scenes in Nordic history, Haldane Burgess and Mackay Brown each construct a distinctive sense of

geographical and cultural place. This approach allows the boundaries of the Nordic cultural sphere to be extended, and for a new and complex third space to emerge, in which the islands connect the Nordic and Anglo-Celtic realms and situate them within world literature.

Northern Atlantic Islands and the Sea: Seascapes and Dreamscapes

Iceland, the Faroe Islands, Orkney, Shetland and, to some extent, the Hebrides, share both a Nordic cultural and linguistic heritage, and the experience of being surrounded by the ever-present North Atlantic Ocean. This has been a constant in the islanders' history, forging their unique way of life, influencing their customs and traditions, and has been instrumental in moulding their identities.

This volume is an exploration of a rich, intimate and, at times, terrifying relationship. It is the result of an international conference held in April 2014, when scholars from across the North Atlantic rim congregated in Lerwick, Shetland, to discuss maritime traditions, islands in Old Norse literature, insular archaeology, folklore, and traditional belief. The chapters reflect the varied origins of the contributors. Icelanders are well represented, as are scholars based in Orkney and Shetland, indicating the strength of scholarship in these seemingly isolated archipelagos. Peripheral they may be to the UK, but they lie at the heart of the North Atlantic, at the intersection of British and Nordic cultures.

This book will be of interest to scholars of a wide range of disciplines, such as those involved in island studies, cultural studies, Old Norse literature, Icelandic studies, maritime heritage, oceanography, linguistics, folklore, British studies, ethnology, and archaeology. Similarly, it will also appeal to researchers from a wide geographical area, particularly the UK, and Scandinavia, and indeed anywhere where there is an interest in the study of islands or the North Atlantic.

DNA evidence of bowhead whale exploitation by Greenlandic Paleo-Inuit 4,000 years ago

The demographic history of Greenland is characterized by recurrent migrations and extinctions since the first humans arrived 4,500 years ago. Our current understanding of these extinct cultures relies primarily on preserved fossils found in their archaeological deposits, which hold valuable information on past subsistence practices. However, some exploited taxa, though economically important, comprise only a small fraction of these sub-fossil assemblages. Here we reconstruct a comprehensive record of past subsistence economies in Greenland by sequencing ancient DNA from four well-described midden deposits. Our results confirm that the species found in the fossil record, like harp seal and ringed seal, were a vital part of Inuit subsistence, but also add a new dimension with evidence that caribou, walrus and whale species played a more prominent role for the survival of Paleo-Inuit cultures than previously reported. Most notably, we report evidence of bowhead whale exploitation by the Saqqaq culture 4,000 years ago.

Little Fish, Big Pond: Icelandic Interests and Influence in Arctic Governance

This paper explores the interests and influence of Iceland in the Arctic. Iceland's position as a member of the Arctic Council is the starting point, examining how this high level intergovernmental forum enables Iceland to exercise influence that belies the size of its population, economy or security capacity. This is contrasted with the exclusion of Iceland from the closer "Arctic Five" talks on Central Arctic Ocean governance and what steps Iceland can take to ensure its legal and economic interests in the seas are protected. The paper reviews the Icelandic Arctic policy, based on Hagsmunir Íslands á norðurslóðum, in light of the two earlier Arctic policy statements, Ísland á norðurslóðum (Ministry of Foreign Affairs 2008) and the Parliamentary Resolution on Iceland's Arctic Policy (2011), the interests of different Icelandic stakeholders, and the objectives of other Arctic participants (Arctic and non-Arctic States, indigenous peoples, environmental NGOs and business). The approach is interdisciplinary, drawing from international relations scholarship, international law, development economics and broader research in Arctic Studies.

Public Consultation Processes in Greenland Regarding the Mining Industry

Since the Greenland Self-Government Act came into force in 2009, economic development and the right to utilize natural resources in Greenland lies in the hands of the Self-Government. Earlier efforts to establish this authority were made back in the 1970s, when discussions on Home Rule were first on the agenda. Mining industries are not a new activity in Greenland. During the Second World War, Greenlandic cryolite was used to produce aluminum for the North American aircraft industry. Other essential natural resources, such as gold and gemstones, have also received international interest over the years. Greenland's new development aim is to build up a large-scale mining industry. This article elucidates the form of public consultation processes followed in Greenland in connection to two large-scale mining projects and the different views various actors have regarding these events. How did the deliberative democratic process unfold in Greenland regarding these projects? Was the process followed and effective way to manage these kinds of projects? The article shows that two projects that received a lot of media attention: the 2005 iron ore mine project Isukasia, and the 2001 TANBREEZ-project to extract rare earth elements, used highly different approaches when it comes to deliberative democracy. In the former case, a limited degree of deliberative democracy was used, while in the latter case, the opposite applies.

Hverdagslivsinterview - videnskabsteoretisk baggrund

I denne video diskuteres vidensformer i praksis, og hvordan de værdisættes i forskellige tilgange til sundhedsforskning. Der argumenteres for, at viden om personlige betydninger af at leve med sygdom må sidestilles med eksperimentel viden om effekten af medicinske indsatser. Det vises, hvordan viden om patienternes perspektiver ligger i den daglige livsførelse.

Patienter og pårørende føler sig ikke hørt

Brugerinddragelse er et omstridt begreb i dagens sundhedsvæsen. Samtidig fremgår det af undersøgelser, at patienter og pårørende ofte ikke føler sig inddraget i professionel praksis. En undersøgelse af patientperspektiver på sundhedspraksis i Grønland har peget på, at inddragelsen må omfatte patienternes egen viden om deres vanskeligheder med at få livet med sygdom til at hænge sammen i hverdagen og deres perspektiver på mulighederne for at håndtere det. Hvis professionelle indsatser begrænser sig til den kropslige sygdom og behandling, falder de ofte til jorden. Derfor må patienterne inddrages som deltagere med betydningsfuld viden for professionel praksis. Barriererne for inddragelse af patienterne handler både om praktiske rammer og professionelle forståelser af kultur og viden. Sygeplejersker har en gunstig position i forhold til at inddrage patienterne som deltagere. Det kræver refleksion over egen praksis som del af et almennyttigt sundhedsvæsen.

Patientperspektiver og demokratisk deltagelse i sundhedspraksis

På baggrund af et forskningsprojekt i patientperspektiver på sundhedspraksis i Grønland vises betydningen af samspillet mellem professionel praksis og patienternes muligheder for at håndtere hverdagen med sygdom. Kulturforskelle mellem professionelle og patienter og deres betydning for inddragelse af patienterne i professionel praksis vises. Endelig diskuteres problematikken omkring overtagelse af sundhedsstrategier fra Danmark, hvordan strategierne er domineret af en biomedicinsk tilgang, og hvordan Grønland kan bruge danske sundhedsstrategier på den grønlandske befolknings egne præmisser.

Patientinddragelse og kulturforståelse

På baggrund af et resume af resultaterne fra projektet 'Hverdagsliv med sygdom - patienters kulturelle perspektiver på sundhedspraksis i Grønland' fremhæves de professionelle mangelfulde muligheder for at inddrage patienterne i professionel praksis trods hensigter om det modsatte. Ud fra projektets teoretiske

tilgang til 'hverdagsliv' skitseres en model for, hvad en professionel samtale må indeholde, hvis patienterne skal inddrages i praksis på deres egne præmisser.

Unge på vej: netværk, deltagelse og lokalsamfund

Kapitlet undersøger udsatte unges adgang til netværk, deltagelse og lokalsamfund og på, hvad det betyder for socialt arbejde med unge, hvis det aktivt skal fokusere på relationer, netværk og deltagelse i de lokalsamfund, de unge lever i. Kapitlet udfordrer en traditionel, professionel hjælperolle og peger i retning af netværksarbejde og brobygning som nødvendige faglige styrker, der må udvikles.

Fra lukket til åben dialog: udviklingsmuligheder for socialt arbejde i Grønland

Artiklen peger – med fokus på børn og unge – på potentielle udviklingsmuligheder for community-baseret socialt arbejde i Grønland. Der er i øjeblikket et øget fokus på at vende interessen hen mod strukturelle og lokalsamfunds-orienterede metoder i det sociale arbejde. Nogle af disse metoder henter inspiration i oprindelige folks viden om og former for social støtte.

Fremtiden tilhører os: om det smukke og forunderlige i Nanortalik og Tasiilaq

Bogen beskriver og diskuterer de historiske og videnskabsteoretiske baggrunde for at udforme en reflektiv baseline for interventioner, der støtter og styrker social resiliens i to byer i Kalaallit Nunaat/Grønland. Det vises og dokumenteres, hvordan en reflektiv baseline kan tilbyde en måde at forske på, der aktivt styrker sociale ressourcer og derved virker transformativ i sin udførelse.

Projektets forsknings-del, som specifikt omtales i kapitlerne 2 og 3, er central for en forståelse af hele projektet, er udført af professor, Peter Berliner og er blevet til på baggrund af Peter Berliners mange års forskning i grønlandske forhold og projekt Siunissaq's konkrete aktiviteter og udførelse.

Respectful Neighbourliness: the United Kingdom's Arctic Approach

This paper examines recent developments in British policies towards the Arctic from the Environmental Audit Committee of the House of Commons, the Government, and the House of Lords Arctic Committee. It concludes that while the United Kingdom may be geographically the Arctic's nearest neighbour, the former has too many competing demands for its attention to prioritise the Arctic in its international relations.

Environmental Governance through the Arctic Council: the Arctic Council as Initiator of Norms of International Environmental Law

In this paper, Professor Johnstone explores the potential for the Arctic Council to initiate norms of international environmental law. The hypothesis to be explored is whether the Arctic Council can be equally or even more effective by developing non-binding standards in the Arctic as it can by pursuing 'hard law', for example, through binding treaty agreements. Challenges facing the Arctic Council as an institution in establishing binding norms will be discussed, including international and domestic political barriers to treaty-making and the difficulties of opening binding instruments to States outside of the Arctic. On the other hand, the vulnerability of non-binding standards to political wind-changes means that non-binding standards may not be sufficient to protect the Arctic environment and there may still be a role for treaty-based norms.

The Principle of "Full Reparation" for Environmental Damage and Very Small States

Greenland's independence to some extent pivots on the exploitation of natural resources, including offshore hydrocarbon resources. The exploitation of oil and gas is inherently hazardous and offshore activities and marine oil transports bring a risk of a serious pollution incident affecting the interests of other States. The long-established principle of full reparation for injuries indicates that should a major accident occur under an independent Greenland's watch, Greenland would bear a potentially unlimited liability to compensate affected parties. However, for a post-colonial State of under 60,000 souls, an overwhelming compensation claim could be disastrous: indeed, it could be sufficiently overwhelming as to compromise the rights of the Greenlandic people to self-determination and permanent sovereignty over their own resources, as well as a number of

fundamental human rights found in international customary and conventional law. This chapter examines how such a conflict between the principle of full reparation and the rights of peoples to self-determination might be resolved in practice in light of the ILC Articles on State Responsibility, international customary law and *ius cogens*, international human rights treaties and the few pertinent, though limited and distinguishable, cases that have been decided to date. The chapter concludes by finding that the principle of self-determination has a peremptory status and thus in the event of conflict with the principle of full reparation, the latter must be considered subservient. However, there may be scope for greater flexibility in the mode and timescale of reparation than in its quantum.

Little Italy: Seeking a Niche in Arctic International Relations

In December 2015, The Italian Ministry for Foreign Affairs and International Cooperation published *Verso una strategia italiana per l'artico* (Towards an Italian Strategy for the Arctic). In this article, the authors explain and evaluate the document in light of Italy's connections to and interests in the Arctic, the Kiruna rules for observers at the Arctic Council, and the Arctic policies of other observers. They conclude that the intended audience for *Verso una strategia* is the Arctic States. Therefore, the document emphasises relevant Italian scientific efforts and promotes Italy's oil and gas industry while downplaying the rights of indigenous peoples and avoiding issues of controversy. Publication of the document as a work in progress indicates the ministry's willingness to listen to feedback and adapt its approaches as it develops a more comprehensive and nuanced strategy.

Traditional Knowledge and Industrial Development

There is currently a growing interest in industrial initiatives and development in the general Greenlandic population. Numerous scenarios for the establishment of industries that are based on natural resources such as minerals, fish and oil are pursued in this regard. In considering the growing activities in the area of industrial development, existing informal knowledge in Greenland may become a useful human resource and a societal institution in the gradual process of transition from traditional to modern industries. This chapter acknowledges and examines the potential benefits of informal knowledge in relation to capacity building, sustainable development and employment opportunities within industry in Greenland. In acknowledging such potential, we will discuss if possessing traditional knowledge (also called local knowledge and here from referred to as TK), can be viewed as complementary qualifications and useful competences when it comes to proposed industrial development in Greenland. The chapter will focus on how TK can be used to access relevant competences in the development and ongoing transitions that are taking place in Greenlandic society today, by emphasising the possibility of either promoting local content or securing local benefits through derived opportunities. We perceive these transitions - not necessarily according to a western model of society – but, rather as a unique course towards a modern Inuit society where activities may be combined without compromising the opportunity to continue traditional activities.

Offshore oil exploration and impact assessment in Greenland

According to the United States Geological Survey, the Greenland basin is estimated to contain 17 billion barrels of oil and potentially 138 billion cubic feet of natural gas (Bird et al. 2008). Other, more moderate, models predict that Greenland contains "substantial reserves" (see eg. Cavallo 2002, Geuns 2012). Oil development is therefore high on the agenda in Greenland. It is being pursued both as the means to grow the economy and as a path to increased economic and political independence from Denmark (Østhagen 2012).

Oil projects are expected to produce benefits for Greenlanders, but these benefits cannot be achieved without careful planning and project management. To ensure that negative impacts are mitigated and that positive outcomes are achieved, Impact Assessments (IA) have been implemented to promote sustainable development in the sector. Additional Impact Benefit Agreements (IBA) have to be negotiated between the affected communities, the government, and oil companies to ensure that social investments are made to secure long-term benefits for local communities.

The Principle of 'Full Reparation' for Environmental Damage and Very Small States

Given the magnitude of the risks associated with commercial activities in the Arctic arising as a result of the milder climate, new business opportunities raise important questions of responsibility and liability. This book analyses the issues of responsibility and liability connected with the exploitation of natural resources, marine

transport and other activities in the Arctic. Applying a combined private and public law perspective on these issues, it considers both the business and societal interests related to Arctic development using Greenland as an example. The book focuses on problems that are specific to Greenland and wider issues that affect all Arctic states.

Educational possibilities in digital communication and infrastructure

The chapter discuss educational conditions in Greenland in perspective of ICT as basic infrastructure in modern societies. Cloud computing utilizing online programs, platforms and knowledge resources is taking over from paper and pen, books and offline stationary computers. Research is presented showing how Cloud computing is supportive of learning goals decided by politicians. In the chapter it is discussed how Greenland is lacking behind in providing pivotal educational possibilities for the population.

Coastal Cultures in Scotland and Norway: Narratives, Affinity, Contact

This book chapter investigates transnational cultural encounters that cross the established research areas of Northern European, Nordic, and Scandinavian Studies. Using approaches from Scandinavian research on coastal communities and cultural spaces, the article examines cultural transfer between Norway and Scotland through trade and exchange during the eighteenth and nineteenth centuries. The interdisciplinary and transnational approach adopted throughout the paper suggests new perspectives in researching coastal communities in Britain, as part of a wider understanding of cultural encounters between the communities of the North.

Des bateaux et des hommes: Objets interculturels et identite regionale en Norvege Occidentale et dans les Illes Shetland

Cet article porte sur le rôle du bateau en tant que médiateur des cultures tangible et intangible dans la région

de l'Atlantique nord, en comparant la représentation des bateaux et les collections maritimes conservées dans les musées dédiés aux folklores écossais et norvégien. Il explore les similarités et les différences des définitions de la côte comme « lieu maritime » par le biais d'objets, et s'intéresse plus particulièrement aux récits et aux aspects d'une mémoire commune influençant la formation de traditions culturelles régionales et nationales. En liant la théorie du transfert culturel aux études sur la culture matérielle, et à l'aide de l'approche microhistorique de l'Alltagsgeschichte, nous comparerons la façon dont les habitants des Shetland et les Norvégiens occidentaux ont participé à la construction et à leur identification à la culture côtière [kystkultur] par l'entremise d'objets maritimes et narratifs.

Nordic Border Crossings: Coastal Communities and Connected Cultures in Eighteenth-Century Norway, Scotland, and Canada

Coastal cultures form a complex area of research, offering new opportunities to investigate and understand the history of cultural encounters and transnational "regions of culture" across the Northern peripheries. This article investigates the connected cultures of coastal communities of Norway, Scotland, and Canada after 1700. A shared, diverse, but similarly sea-focused cultural landscape exists across the North that informs the way in which regional cultural identities are formed and maintained. Using new methodologies of cultural transfer such as entangled histories or *histoire croisée*, this article pays particular attention to the creation of transient cross-cultural networks and regions stimulated by trade and related contacts across the North Sea and the North Atlantic.

Problems of Professional Disempowerment: An Initial Study of Social Work Conditions in Greenland

This study explores social workers' experiences in a social service department in Greenland. The social workers described limiting factors, such as an absence of management and a dysfunctional interdisciplinary network. They described feelings of frustration and individualization, which are known stressors. We found that the social workers were in a disempowered position that hindered their management of key welfare services. Serious problems were found that could have consequences for professional social work with clients. By drawing upon the traditions behind critical social work in our discussion of the findings, we have furthered our understanding of the workers' conditions. We point to issues at local, interdisciplinary, and societal levels. One solution will be to work collaboratively with social workers by using empowerment strategies to strengthen a critical consciousness within the profession. The development of a critical capacity is essential if social workers are to organize anti-oppressive practices and interdisciplinary co-operation, and to engage proactively in the future development of the Greenlandic welfare system. This can be accomplished by working with educated social workers in a union and by introducing more critical understandings at the student level.

The Political Parties in Greenland and Their Development

This article will give an overview of the Greenlandic parliamentary elections from the advent of home rule to today's self-government. The point of departure will be to look at the party mobilization throughout the years and the electoral results with voter turnout and candidate nominations. The article will be placed within the framework of theories regarding voter behaviour and electoral systems. Questions to be answered are e.g.: Can we draw a trend of change of party positions throughout the years? Have the parties changed their ideology throughout time? Is there a specific pattern in Greenlandic politics regarding mobilization in politics in comparison to other sub-national jurisdictions? What can be said about voter behaviour amongst the people?

Hverdagsliv med sygdom - patienters kulturelle perspektiver på sundhedspraksis i Grønland

Selv om sundhed siden midten af sidste århundrede gennem WHO's sundhedsdefinition er begrebet som 'det gode liv' i en samfundsmæssig sammenhæng, så er praksis i sundhedsvæsenet stadig domineret af en opfattelse af sundhed som fravær af sygdom. Bogen undersøger, hvordan det fra patienters perspektiver opleves at leve et liv med følger af sygdom og behandling, og hvordan de håndterer det i hverdagen. Gennem interviews og observationer følges et antal patienter under indlæggelse og i deres hjemlige sammenhænge i byer og bygder, og det belyses, hvordan de sundhedsprofessionelle indsatser hænger sammen med patienternes muligheder i den daglige livsførelse. Koblingen mellem sundhedspraksis og patienternes hverdagsliv viser betydningen af at inddrage patienternes perspektiver i tilrettelæggelsen af sundhedsydelse, hvis de skal opleves som relevante og brugbare af patienterne. Bogen peger således også på behovet for at opprioritere patienters viden som et vigtigt bidrag til kvalitetsudvikling af sundhedspraksis. Bogen henvender sig til bredt til professionelle i sundhedsvæsenet, studerende ved sundhedsuddannelserne, sundhedsforskere og beslutningstagere og i øvrigt til alle med interesse for sundhed og samfund.

Hverdagsliv med sygdom - resultater

Artiklen dokumenterer gennem et empirisk projekt om patienters perspektiver på sundhedspraksis i Grønland, at alle indsatser i sundhedsvæsenet, fra diagnosticering og behandling til pleje og rehabilitering, har betydning for patienters og pårørendes muligheder for at håndtere livet med sygdom i hverdagen. Bl.a. pga kulturelle og sproglige barrierer overses dette ofte af de professionelle. Forskningen viser også de mange ressourcer, patienter og pårørende besidder, men som sjældent bliver inddraget i professionel praksis. Der gives forslag til, hvordan dialogen mellem patienter og professionelle må foregå mhp inddragelse af patienternes perspektiver.

Etik, kultur og viden

Artiklen refererer til et etiktræf mellem de sygeplejeetiske råd i Norden i efteråret 2015. De emner, der var oppe på træffet, diskuteres ud fra en tilgang til etik som gensidig anerkendelse af forskellige kulturelle former for livsførelse og viden, ikke som følge af etniske og nationale kendetegn, men som følge af hverdagslivet, som det føres under forskellige samfundsmæssige betingelser i forhold til at skabe et eksistensgrundlag. I denne ramme forstås etisk forsvarlige måder at møde patienter i sundhedsvæsenet på.

Disaster mental health: research and implications for intervention

In this chapter we focus on disaster mental health, particularly theoretical and research-based implications for intervention. The field of disaster mental health research is vast and impossible to cover in a single chapter, but we will visit central research, concepts, and understandings within disaster mental health and intervention, and refer to further literature where meaningful. We conclude the chapter with recommendations for further research.

Northern Maps: Re-negotiating space and place in the Northern Isles and Norway in the eighteenth century

This article argues that cartography and topographical description played a significant role in the way in which areas of the Scottish Northern Isles were represented and visualised, as a regional space, after the political union of England and Scotland in 1707, and, alongside that, the development of the concept of a British state and nation. Not only did topographical literature become more professionalised and commercially-oriented during the eighteenth century, but the visual representations of territories created in maps and charts became part of a network of cultural practices that both linked and divided historical regions across the British Isles. On the one hand, map-making re-negotiated national spaces in order to contribute to the formation the United Kingdom or Great Britain (itself a complex national entity) and, on the other hand, it provided an opportunity to re-create a sense of place or Northern regional identity, continuing to be part of an intercultural Northern European maritime region linked by the North Sea. As can be seen in the following case studies from the Shetland Islands and Western Norway, at 'image level', the change in perceptions about a region's identity (or one's own, within that region), often follows a long process, 'since shifts in the attitudes of mental mapping tend to slowly follow changes in political and social conditions, mixing with philosophical and aesthetic conventions of the time'.

Education in Greenland 1973-2004/06 – an analysis based on three living conditions surveys

The chapter looks at the transition from traditional to formal education and the expansion of the Greenlandic school system as well as the prioritization of education and political goals from the Danish State and Home

Rule government of Greenland. By looking at the tradition of education and comparing educational data in Greenland over the span of over 30 years, the rapid development of the education level measured by the proportion of the population having a formal education (i.e. a formal education beyond the primary school) of the Greenlandic population has increased from 28 percent to 47 percent, indicating that the Greenland Home Rule and Self Government – despite challenges, setbacks and a lack of tradition for formal education beyond the public school – is on the right track.

The Redemption of the Washington Consensus in Latin America

This article revisits the key developments of the experience of Latin American countries with structural economic reforms since the decade of the 1980s. It discusses the historical and policy dilemmas that these countries have faced upon the economic consequences of the policy prescriptions from the so-called 'Washington Consensus'. It is argued that despite the initial meager benefits from these policies, recent economic progress can be seen as redemption for the region.

The Postcolonial North Atlantic: Iceland, Greenland and the Faroe Islands

Iceland, Greenland and the Faroe Islands have in common their history as Danish dependencies within a historically and geographically coherent region. The complex aftermaths of Denmark's sovereignty over its North Atlantic territories and their ongoing nation building processes lie at the core of this book. Today, we are witnessing region building processes beyond bilateral links to Denmark. How do the countries position themselves, individually and collectively, vis-à-vis the European metropolitan centres, a larger transcontinental North Atlantic region, the 'hot' Arctic, and global histories of colonialism and decolonisation? By examining the region from cultural, literary, historical, political, anthropological and linguistic perspectives, the articles in this book shed light on Nordic colonialism and its understanding as 'exceptional', and challenge and modify established notions of postcolonialism. Iceland, Greenland and the Faroe Islands are shown to be both the

(former) subjects as well as the producers of cultural hierarchisations in an entangled world.

Nuuk underground – Musical change and cosmopolitan nationalism in Greenland

In Nuuk, the capital of Greenland, there have been a significant number of musical events in recent years that have been called 'underground'. These have formed an underground scene that offered a cosmopolitan alternative to established 'greenlandified' popular music. This paper accounts for the building of this underground scene by Nuuk youth, and asks why these young people valued musical change informed by a cosmopolitan outlook, while at the same time holding firmly to the conviction that their activities were a part of the dominant Greenlandic nation-building project. Social agents, which played key roles in building the Nuuk underground scene, described their activities as attempts to come to terms with a history in which Greenland has been perceived as a subaltern nation. This enquiry explains the nationalist logic behind a concern with performing similarity with Western nations in the Nuuk underground scene, as opposed to the more widespread romantic nationalist logic concerned with expressing a distinguishable national character. This further leads to an expansion of a position of cosmopolitan nationalism.

Scandinavia and "the Land of UnSwedish Freedom": Jonathan Franzen, Susanne Bier and Self-conceptions of Exceptionalism in Crisis

The chapter deals with self-conceptions of exceptionalism in the United States and in Northern Europe. The notion that one nation, one region or one group is exceptional, conflicts with globalization theory. Because of migrating people, goods and ideas, the world is understood to become more homogeneous (Appadurai 2008; Comaroff & Comaroff 2012). However, globalization incorporates a globalization of risks, conflict (Beck 2007) and uncertainty (Bauman 2000), too. As contemporary Western societies are increasingly characterized by crisis and insecurity, there appears to emerge a need to highlight the unique features of the "Self". Phrases like »American Exceptionalism« and »Nordic Exceptionalism« have become common in political discourses from the 2000s, and are at once subject to a critical negotiation within popular culture, literature and film. In the following discussion, I will show how the American and the Scandinavian self-conceptions of exceptionalism are interdependent. The analysis starts in America with an examination of a satirical television show by American stand-up comedian, Wyatt Cenac. Together with Jonathan Franzen's novel "Freedom", it serves as an example of artistic approaches to a discursive strategy, which uses images of Scandinavia as a category of distinction in order to consolidate the libertarian idea of »American Exceptionalism«. The second part of the chapter concerns Scandinavian visual arts' current reevaluation of the narratives, which form the basis for notions of »Nordic Exceptionalism«. Here, I will demonstrate how Susanne Bier's feature films "Efter Brylluppet" (»After the Wedding«) and "Hævnen" (»In a Better World«) contribute to the critical negotiation of a Nordic self-conception, characterized by altruism and ethical and moral superiority.

Socialt arbejde og aktionsforskning i Grønland

Socialforskningen i Grønland har gennem årtier dokumenteret sociale problemer. Populært sagt har socialforskningen i Grønland indtil for nylig kun bestået af beskrivende, kvantitativ elendighedsforskning. Der eksisterer således (modsat fx socialforskning med canadisk inuit) stort set ikke nogen kvalitativ eller deltagerorienteret forskning om vilkår for indsatser og praksis i forhold til at håndtere de sociale udfordringer. Der har således manglet sociologisk og handlingsorienteret praksisviden, der kan understøtte professionel og organisatorisk kapacitetsopbygning i det socialpolitiske felt. Denne artikel handler om empowerment og aktionsforskning med socialarbejdere i Grønland og bygger på Steven Arnfjords ph.d. projekt fra 2014.

Deltagende Aktionsforskning med Socialrådgivere - Empowerment af Grønlands oversete velfærdsprofession

Ph.d.-projektet er sagt med en kort sætning: - et deltagende aktionsforskningsprojekt om socialrådgiverprofessionens muligheder og forudsætninger for at lave socialt arbejde samt deres positionering i det socialpolitiske felt. I projektet arbejdes der med socialrådgiverprofessionens faglige vilkår. Faglighed indbefatter dels socialrådgivernes mulighed for at arbejde fagligt og dels deres muligheder for at organisere sig som en profession, hvor professionsbegrebet her anvendes bredt. Vi har ingen tidligere professionsstudier, som giver et indblik i arbejdsgrundlaget for at de store velfærdsprofessioner (socialrådgivere, skolelærere, pædagoger og sygeplejersker). Dermed eksisterer der et manglende indblik i, hvilken faglig og organisatorisk kapacitet velfærdssamfundet har i forhold til den omfattende mængde af sociale udfordringer, som vi står overfor. Projektet er undervejs blevet todelt i et etnografisk- og delvist deltagerorienteret studie og i et deltagende aktionsforskningsstudie om en begyndende landsdækkende faglig organisering af socialrådgivere. Projektets første del var et etnografisk feltarbejde med 15 socialrådgivere i Kommuneqarfik Sermersooq's afdeling for børn- og familier. Det var landets største. Socialrådgiverne deltog, forud for en række møder, i kvalitative interviews, observationer, en temadag om anerkendelse, to fokusgrupper og et fremtidsværksted. Analyserne fra denne første del viste tegn på en engageret men disorganiseret og disempoweret profession. Selvom om planen hos mig oprindeligt var at skride direkte til empowerment-tiltag var det nødvendigt med en konkret analyse, en baseline, som kunne fremskrive tingenes tilstand. Der var tale om en gruppe socialrådgivere, som beskrev kaotiske tilstande i sagsbehandlingen af børnesager, en høj personaleomsætning, flere indikatorer på stress og en generel mangel på anerkendelse fra deres ledelse og fra de tværfaglige netværk. Det blev vurderet, at det ville være vanskeligt alene at fokusere på problemløsningsmetoder i afdelingen da flere af problematikkerne berørte temaer, som hørte til på et overordnet fagligt organisatorisk (meso) niveau. Det etnografiske feltarbejde blev konkluderet med en artikel, hvor jeg fremstillede de ovenstående problematikker og foreslog kommende aktiviteter omkring øget faglig organisering og fokus på empowerment af socialrådgiverprofessionen som et overordnet tiltag. Socialrådgiverne er den eneste af de fire velfærdsprofessioner, som for tiden ikke er fagligt organiseret med egen forhandlingsret. Projektets anden del er en operationalisering af disse forslag. Der blev indledt et samarbejde med en gruppe socialrådgivere, som var gået sammen om at danne en landsdækkende socialrådgiverforening NIISIP (Nunatsinni Inunnik Isumaginninermi Siunnersortit Ilinniarsimasut Peqatigiiffiat). Samarbejdet har været efter alle kunstens regler i deltagende aktionsforskning. Indledningsvist spurgte jeg "Er der noget I vil kunne bruge mig til?" Efterfølgende har vi holdt en række koordinationsmøder, hvor jeg har fungeret dels som facilitator, som naiv spørger og som ekspert. Foreningen havde ambitioner om at øge deres medlemstal og opnå selvstændig forhandlingsret samt at være en tydelig stemme i den socialpolitiske debat, som har været ført fra et politisk synspunkt, et NGO synspunkt og et civilsamfundssynspunkt men kun i et meget begrænset omfang fra et fagligt perspektiv. Gennem aktionsforskningsforløbet har foreningen fået formuleret fem mærkesager. De har fået en hjemmeside, været i medierne og har fået udvidet deres medlemstal fra 8 til 43. Vi har gennem bestyrelsesmedlemmerne fået indblik i, hvor mange socialrådgiverstillinger der er på landsbasis (Estimatet er lige under 100. Det besværliggøres ved, at mange stillinger er besat af folk med en kontoruddannelse). I aktionsforskningsprojekter vil det være illoyalt overfor en kritisk aktionsforskningsepistemologi at konkludere ud fra en deduktiv argumentationslogik. Projektets konklusioner kommer derfor til at dreje som om beskrivelser af de empowerment-processer og den aktion, som der er dokumentation for. Når aktionsforskningsprocessen i sin epistemologi er ufærdig skyldes det en konstant bevægelse mod ny erkendelse. Denne bevægelse vil i projektets analyse blive til refleksioner over, hvorledes projektets teoretiske

udgangspunkt, som i overvejende grad er sociologisk marxisme, har bidraget analytisk til at realisere det metodiske arbejde med praksis for at forandre praksis. Konkluderende har projektet bidraget på tre niveauer: Det videnskabelige som er aktionsforskning, det praktiske som er socialrådgiverprofessionen og det socialpolitiske niveau. Aktionsforskningen har målrettet fokuseret på forandrings- og frigørende processer. Det har ført til, at der i forskningsforløbet er arbejdet med empowerment på et vertikalt og et horisontalt niveau. Socialrådgiverne har gennem forskningssamarbejdet fået styrket deres muligheder for at øge organiseringen af det socialfaglige arbejde. Det har skabt forandringsprocesser på et demokratisk grundlag. Endvidere har dette bidraget til en grad af tillid til forskningsprocessen som kan føre til øget forskning i fremtiden. Det socialpolitiske niveau kan i sidste ende blive styrket positivt ved at modtage indlæg fra en bedre organiseret aktør, som kan indgå i debatten om udviklingen af fremtidens velfærdssamfund.

Bacterial diversity in snow on North Pole ice floes

The microbial abundance and diversity in snow on ice floes at three sites near the North Pole was assessed using quantitative PCR and 454 pyrosequencing. Abundance of 16S rRNA genes in the samples ranged between 43 and 248 gene copies per millilitre of melted snow. A total of 291,331 sequences were obtained through 454 pyrosequencing of 16S rRNA genes, resulting in 984 OTUs at 97 % identity. Two sites were dominated by Cyanobacteria (72 and 61 %, respectively), including chloroplasts. The third site differed by consisting of 95 % Proteobacteria. Principal component analysis showed that the three sites clustered together when compared to the underlying environments of sea ice and ocean water. The Shannon indices ranged from 2.226 to 3.758, and the Chao1 indices showed species richness between 293 and 353 for the three samples. The relatively low abundances and diversity found in the samples indicate a lower rate of microbial input to this snow habitat compared to snow in the proximity of terrestrial and anthropogenic sources of microorganisms. The differences in species composition and diversity between the sites show that apparently similar snow habitats contain a large variation in biodiversity, although the differences were smaller than the differences to the underlying environment. The results support the idea that a globally distributed community exists in snow and that the global snow community can in part be attributed to microbial input from the atmosphere.

Grønlandsk mad på menuen

Artiklen formidler et interview med den tidligere økonoma ved Qaqortoq Sygehus, Lena P. Fisker, som indførte Nyt Nordisk Køkken for Mange. Det betød sundere, overvejende økologisk, og mere velsmagende mad til patienterne, brug af lokale råvarer og et meningsfuldt arbejde for de ansatte i køkkenet.

Polar Bears, Eskimos, and Indie Music – Using Greenland and the Arctic as a co-brand for popular music

Certain Greenlandic popular music artists use the Greenlandic nation brand as a co-brand for their music when attempting to gain attention on the international music market. By examining various strategies for co-branding music together with the Greenlandic nation, this article discusses how the two bands Nive Nielsen and the Deer Children, and Nanook, articulate connections between their music, and Greenland and the Arctic, through narratives, symbols and sounds. Using existing narratives and stereotypes means acting within existing discursive fields, as well as the expectations of international music audiences, and though this may open up new opportunities for the artist, it may also limit the artist's agency, because the artist may then be expected to act in accordance with these expectations. But in terms of changing the Greenlandic nation brand image, which is very much caught up in narratives from the past, co-branding Greenland and modern popular music could be a strategy with great potential.

Transforming a disempowered social worker profession using participatory action research in Greenland

The social worker profession in Greenland has to some extent been overlooked in Greenlandic social research the last 50 years. Perhaps it is because the professionals have not had a voice in the social political debate, or it may be due to the fact that the majority of social research conducted in Greenland has a traditional approach to research as an objectifying activity. To counter-act these hypotheses, this research project is inspired by the work of Paulo Freire, modern Marxism, and critical theory. An analysis of how current working conditions and structures disempower the possibility of doing what social workers in Greenland view as good social work is

followed by a discussion of how we have designed this study as a participatory action research project. Participation is about inviting social workers to collaborate with us during the project - a process we believe will result in democratic sustainable research. Moving from problem identification via participatory collaboration and on to problem solving through the transformative methodologies of focus groups and workshops, the empirical findings will guide the next steps of the research process towards creating a better understanding of social workers' working conditions.

Conceptualizing and contextualizing food insecurity among Greenlandic children

Objective: To review the context of food insecurity in Greenlandic children, to review and compare the outcomes related to food insecurity in Greenlandic children, in other Arctic child populations and in other western societies, and to explore the measure used by the Health Behaviour in School-aged Children (HBSC) study.

Design: The study includes literature reviews, focus group interviews with children and analyses of data from the HBSC study. HBSC is an international cross-national school-based survey on child and adolescent health and health behaviour in the age groups 11, 13 and 15 years and performed in more than 40 countries. The item on food insecurity is "Some young people go to school or to bed hungry because there is not enough food in the home. How often does this happen to you?" (with the response options: "Always", "Often", "Sometimes", or "Never").

Results: The context to food security among Inuit in Arctic regions was found to be very similar and connected to a westernization of the diet and contamination of the traditional diet. The major challenges are contamination, economic access to healthy food and socio-demographic differences in having a healthy diet. The literature on outcomes related to food insecurity in children in Western societies was reviewed and grouped based on 8 domains. Using data from the Greenlandic HBSC data from 2010, the item on food security showed negative associations on central items in all these domains. Focus group interviews with children revealed face and content validity of the HBSC item.

Conclusion: Triangulation of the above-mentioned findings indicates that the HBSC measure of food shortage is a reliable indicator of food insecurity in Greenlandic schoolchildren. However, more research is needed, especially on explanatory and mediating factors.

Fredsopbygning som social og materiel læring

I denne artikel beskriver vi den lokale befolknings skabelsen af et fredsområde (Space for Peace) midt i borgerkrigen på øen Mindanao i Filippinerne. Fredsopbygning er en social læringsproces, der omfatter en transformation og restoration af det social-økologiske system, der omfatter såvel det spirituelle, det diskursive, det sociale, og fordelingen af materielle ressourcer. Det sociale aspekt er dermed blot ét element i denne proces – og det argumenteres derfor for at denne læringsproces omfatter langt mere end blot det sociale. Fredsopbygningen er en kontinuerlig læreproces, som forener folk i fælles respekt for mangfoldighed. Det fælles grundlag for denne respekt findes i den fælleshed som de tre grupper, der lever sammen i Mindanao, lumads, muslimer og katolikker, har fundet igennem lighederne i deres religioners værdier. Religionen forener

på denne måde – men giver derved samtidigt rum for respekten for diversiteten. Efter analysen sammenlignes fredsprocessen med Magis' teori om social resiliens og Ungars teori om den social-økologiske indlejring af den individuelle resiliens. Det konkluderes, at fredsopbygning i Space for Peace er bygget op omkring en helheds- eller systemforståelse, der omfatter diskursive, sociale og materielle komponenter; en stærk religiøs tro, som forener folk i stedet at adskille dem i gensidigt fjendtlige grupper; og en socialt praktiseret respekt for mangfoldighed. Disse tre aspekter kan bidrage til yderligere udvikling af vores forståelse af social og individuel modstandskraft, ved at bygge videre på Magis' og Ungars teorier.

Draft Genome Sequence of the Psychrophilic and Alkaliphilic *Rhodonellum psychrophilum* Strain GCM71T

Rhodonellum psychrophilum GCM71(T), isolated from the cold and alkaline submarine ikaite columns in the Ikka Fjord in Greenland, displays optimal growth at 5 to 10°C and pH 10. Here, we report the draft genome sequence of this strain, which may provide insight into the mechanisms of adaptation to these extreme conditions.

Reading Material Culture in the North Atlantic: Traditional wooden boxes as intercultural

objects

This article explores intercultural links between the coastal communities of the North Atlantic region by discussing the cultural and social history of Norwegian objects displayed in regional heritage collections in Orkney and Shetland. The relationship between Norway and the Northern Isles of Scotland during the eighteenth and nineteenth centuries, especially trading links, is considered using the bentwood box as a way of accessing both tangible and intangible knowledge. Different types of traditional wooden boxes from Shetland, Orkney, Norway, and Iceland are compared using a microhistorical approach, which enables us to consider Norway and Scotland both as individual "ethno-territories" and as part of continuously changing networks of social and cultural contact across the North Atlantic.

Populærmusik fra Nuuk – Alternativer til en essensbaseret grønlandsk identitet

Grønlandiseringen under Hjemmestyret har resulteret i forestillinger om en essensbaseret 'rigtig' grønlandsk identitet i identitetsdiskursen i Grønland. Igennem mit feltarbejde i populærmusikscenen i Nuuk har jeg oplevet en anden identitetsdiskurs baseret på forestillinger om grønlandsk identitet som noget mere inkluderende, komplekst og erfaringsbaseret. Med fokus på rockbandet Chilly Friday og sangerinden Nina Kreutzmann og med referencer til anden forskning indenfor området forsøger jeg her at identificere denne diskurs, for at påvise at essensbaserede forestillinger om grønlandsk identitet bliver udfordret i populærmusikscenen i Nuuk.

Hverdagsliv og daglig livsførelse

The theoretical concept of 'everyday life' is ambiguous. Different theoretic approaches offer different epistemological comprehensions of the concept. These have implications for research in everyday life. For the purpose of clarifying the analytical perspective in a Ph.D.-project carried out in and around a hospital ward in Dr. Ingrid's Hospital in Nuuk, the concept of everyday life is discussed from two different angles: a sociological-phenomenological approach and an approach to everyday life based on a critical psychological theory of practice. Questions of subjectivity, practice and social change are put on the agenda in order to discuss how change can be brought about through humanistic health research.

"Nogle vælger døden. Jeg vælger livet, drømmene og troen på fremtiden": om kunst, billeder og unge i Paamiut

The article presents and analyses 20 photographs taken by ten young people in Paamiut, Greenland. The photographs were taken as a part of workshop facilitated by photographer Tina Enghoff and journalist Anette Molbeck and later published as part of a book. The workshop was one of the many activities in the community mobilization program Paamiut Asasara. The photos, their titles and narrative texts are analyzed, using the method of a close reading with a clear focus on the photos themselves, combined with a contextual analysis of the photos. Transparency into the step-by-step analysis is used to secure plausibility of the results. The study shows that the photographs present the following themes: (1) searching for strength; (2) moving forward (to be on the move); (3) the will to choose and to make changes; (4) a longing for close relationship; and (5) valuing love, i.e. to love and to be loved. These themes are understood in the context of traditional Inuit story-telling and in the present situation of the young people in Paamiut as part of the Paamiut Asasara program.

Så rejser jeg mig op og vandrer tilbage til Paamiut: om monologer i unges teater i Paamiut Asasara

I denne artikel undersøges indhold i og betydningen af unges teater monologer – som de fandt sted i forbindelse med Contact's teater-opsætning med en gruppe unge i Paamiut. Forestillingen bestod af 8 monologer, der blev fremsat af de unge. Da der var tale om monologer undersøges det, hvad der er det specifikke i netop monologen som udtryksform i denne bestemte kontekst. Det undersøges her, hvordan monologen i form af fortælling har indgået i Inuits kultur i fortællinger af myter, sagn og eventyr. Dernæst undersøges indholdet i de unges nutidige dialoger. Der afsluttes med en refleksion over betydningen af de unges dialoger i den konkrete kontekst samt mere generelt som en bestemt udtryksform. Artiklen bygger på interviews med de unge deltagere og med andre borgere i Paamiut samt på et spørgeskema og statistik om udviklingen i Paamiut.

Bæredygtig pædagogik og fælles læring som community resiliens

Med afsæt i læringsprocesser i Fisker- og fangerakademiet i Paamiut i Grønland vises det, hvordan man kæder social ansvarlighed sammen med økologisk ansvarlighed. På denne måde knytter læringsprocessen an til community resiliens. Der gives derefter en kort sammenstilling af denne undersøgelses resultater med andre undersøgelser af læring, livskvalitet og resiliens i inuit samfund. Derefter diskuteres dette i forhold til teorier om social økologi og undervisning i bæredygtig udvikling. Metoden er en form for dokument-collage, hvor der bruges både interviews og dokumenter til at belyse den bæredygtige pædagogik i både dens konkrete og dens globale sammenhæng.

Challenges of youth participation in participatory action research: methodological considerations of the Paamiut Youth Voice research project

Paamiut Youth Voice (PYV) is a Participatory Action Research (PAR) project, exploring youth perceptions, experiences, and the promotion of well-being in Paamiut, Greenland. Active youth participation remained a key challenge in the development of the local community through the locally initiated community mobilisation programme Paamiut Asasara. The challenges of youth participation in PYV are investigated in order to explore the implications of youth participation in PAR projects. The discussion of challenges is based on a methodological account of experiences from the research process clarifying how youth participation in the PYV project took place. Results are presented, concerning the young people's understandings and experiences of engagement and participation.

The Uttermost Part of the Earth: Islands on the edge ... and in the centre of the North Atlantic

The Shetland Islands are a good example of what island cultures and societies can tell us about the construction and maintenance of national identities, as well as the way in which historical perspectives and internalised ideas influence how we locate parts of Britain. How do these - other islands become part of the national mental map? And how do islanders themselves incorporate - Britishness into their cultural identity?

For the —Northern Isles|| of Orkney and Shetland, their geographical position has historically meant being an outpost of the British Isles, at its Northern —edge,|| as noted by Sandy Cluness, Convenor of the Shetland Islands Council, in an interview with The Journal: —We are on the periphery and have all the higher costs that come with that and not many of the advantages. This chapter demonstrates that the cultural heritage of the Scottish Northern Islands actually insists on being —other, often resisting, and sometimes opposing, the dominant, national historical and political narratives. The Northern Isles of Orkney and Shetland are therefore of real interest in terms of exploring the complex and adaptable nature of representing —otherness|| within British identity, and the way islanders actively utilise their economic, political and cultural-historical environment to create a multiplicity of localised island identities within the national narrative.

Virtuelt læringsmiljø fastholder elever på EUD

Det var en fedt at arbejde med koblingsopgaver. Der var tæt kontakt med læreren. Det styrkede relationen mellem den praktikansvarlige og mig (eleven). Og vi elever kommunikerede en masse (under praktikopholdet). Sådan siger en grønlandsk tømrerelev, der har fulgt et særligt forløb, der udspringer af projektet COMBAR. Som svar på et markant frafald, ikke mindst i praktikperioden, har man i projektet arbejdet fokuseret på at skabe sammenhæng mellem skole og praktik ved at benytte såkaldte koblingsopgaver, der løses af eleven i dialog med netværket: læreren, den praktikpladsansvarlige og andre elever. Som citatet antyder, så bærer det frugt.

Die Anfänge des grönländischen Romans: Nation, Identität und subalterne Artikulation in einer arktischen Kolonie

Grønland Anfang des 20. Jahrhunderts: Ein koloniales und von Machtasymmetrien geprägtes Land. Zeitgleich mit den ersten Ausbildungsreisen junger Grönländer nach Dänemark kann sich in der bis nach dem Zweiten Weltkrieg abgeriegelten dänischen Kolonie eine eigene Romanliteratur herausbilden. Ebbe Volquardsen begibt sich auf die Spur der Vertreter einer frühen grönländischen Bildungselite, der die Autoren angehören. Er fragt: Wie kann literarisches Schreiben und Publizieren in dieser Konstellation gelingen? Welche Machtmechanismen müssen Grönländer umgehen, um sich als Akteure im literarischen Diskurs zu etablieren? Der Autor analysiert die ersten vier zwischen 1914 und 1938 erschienenen Romane grönländischer Autoren und stellt sie in einen kulturhistorischen Kontext. Welche Bedeutung kommt diesen Romanen im Diskurs um Nationsbildung und Identitätsfindung zu?

A social action learning approach to community resilience: “Our sharing of thoughts and feelings, our respect and trust should be passed on to the next generation”

In Paamiut in Kalaallit Nunaat (Greenland) a community mobilisation programme has been launched as a response to a history of violence, suicides, drug abuse, and child neglect. The overall goal of the programme is to strengthen community resilience, psychosocial well-being and revitalisation of the culture through promotion of locally formulated values and resources, shared activities, mobilisation of social networks, job opportunities and options for entrepreneurship. One of the main goals is to prevent child neglect through a specific programme for young mothers. The chapter describes and analyses the development of concepts, interaction, and social action in the group of young mothers.

Inklusion i foranderlige fællesskaber: et communitypsykologisk perspektiv

Artiklen beskriver, hvordan inklusion udvikles gennem systemer, der sætter muligheder for deltagelse i fællesskaber, der skaber trivsel og vækstmuligheder. Disse fællesskaber har bestemte kendetegn, som vi først nu er ved at kunne beskrive og dermed kunne fremme. Det er i samspillet mellem mennesker i et stort system med mange deltagende over- og subsystemer at muligheden for inklusion findes. Inklusion er indlejret i sociale systemer, der ikke blot taler om, men også praktiserer måder at være sammen på, der skaber ressourcefremmende grupper. Artiklen fremlægger resultaterne af undersøgelser af sådanne grupper oplevede kendetegn.

Forfatter: Peter Berliner; Elena de Casas Soberón **Type:** Article | Artikel **Årstal:** 2011 **Emner:** Resiliens; Fællesskaber; Social støtte **Titel på tidsskrift:** Pædagogisk Psykologisk Tidsskrift **Volume på tidsskrift:** 48 **Nummer på tidsskrift:** 3 **ISSN nummer:** 1903-0002

Lokale værdier og social styrke: rapport om projekt Paamiut Asasara 2011

Den seneste evalueringsrapport om projekt Paamiut Asasara fremlægger konkrete tal, der viser virkningen af projektet. Projektet er formuleret ud fra lokale værdier og visioner samt er lokalt forankret og gennemført af befolkningen og lokale ildsjæle i Paamiut. Det er opbygget omkring et godt og produktivt samarbejde med de kommunale institutioner og lokale forretningsdrivende i Paamiut samt en befolkning, der aktivt støtter projektet. Igennem en række kulturelle, sportslige og sociale aktiviteter har projektet opnået, at folk oplever at byen er blevet revitaliseret og at den er et godt sted at bo, ikke mindst for børnefamilier og unge. Paamiut Asasara er støttet af BikubenFonden samt udført i et tæt samarbejde med Kommuneqarfik Sermersooq. Igennem de senere år har projektet iværksat en række teater-, foto- og sportsaktiviteter for unge og resultaterne viser sig nu ved, at de unge i interview giver udtryk for, at byen er blevet et bedre sted at være ung i - samt at de unge føler sig mere aktivt engagerede i byens udvikling. Der er nu over 35 studerende på Piareersarfik i Paamiut – en udvikling, som mange forhold og aktive indsatser har ført til, herunder også Paamiut Asasara's satsning på de unge. Kriminaliteten er siden projektets start i begyndelsen af 2008 faldet med 45 % - i hele Grønland er faldet på 3 %. Antal husspektakler er faldet med 47 % - i hele Grønland er faldet på 17 %. Paamiut fremhæves i Politidirektøren for Grønlands årsstatistik for 2010 pga. denne gode udvikling. Det kan konkluderes, at faldet i kriminaliteten er markant i Paamiut og at projektets mål om et fald på 50 % over fem år næsten er nået indenfor de første tre år ved en fælles indsats af politi og borgere, hjulpet på vej også af de aktiviteter, som Paamiut Asasara har sat i værk omkring styrkelse af børnefamilier og unge mødre, samt for unge og børn i byen. Både borgere og professionelle i institutionerne nævner i de kvalitative interviews at Paamiut Asasara har medvirket til denne gode udvikling og at Paamiut opleves som et fredeligere sted at bo i nu – og som et godt sted at bo. Dette hænger også sammen med at det sociale netværk opleves som meget bedre nu end ved projektets start. Især omtalte folk dengang ved borgermøder og i aktiviteterne i Paamiut Asasara, at de kunne føle sig alene, når de havde problemer eller sorger i livet. En stikprøveundersøgelse omfattende 34 tilfældigt udvalgte borgere i Paamiut viser, at dette har forandret sig. I forhold til en lignende undersøgelse i 2006 er antallet af positive svar mht. at have nogen, man kan betroe sig til, nogen, der vil lytte til én og prøve at hjælpe én med gode råd, steget med 84 % fra 2006 til 2011. Dette viser, at der er sket en stor stigning i oplevelsen af at have adgang til social støtte – dvs. medmenneskelig omsorg – når man har brug for det. Paamiut er blevet et godt sted at være – 91 % svarer at de altid eller som oftest har adgang til en person, der viser dem kærlighed – i 2006 svarede blot 76 % ja til dette. Familiehuset Tilioq har for mange familier betydet en mulighed for gennem mødet med andre familier at åbne for gensidig social støtte og har gennem fokus på de mange ressourcer, familierne har, givet større trivsel, tryghed og livsglæde. Paamiut Asasara er et projekt, der er bygget på lokale værdier og visioner, og som nu kan dokumentere de gode resultater gennem konkrete tal om uddannelse, faldende kriminalitet og gensidig social støtte.

Man er mere fri: community psykologiske programmer for psykosocial trivsel

Artiklen belyser community psykologisk praksis gennem en præsentation af det community psykologiske perspektiv i psyko-sociale programmer, der iværksættes for at fremme mental og social trivsel hos individer, i familier og i lokalsamfund og netværk. Der gives en beskrivelse og analyse af projektet Paamiut Asasara i Kalaallit Nunaat (Grønland).

Som at noget lettede: strukturel vold og unge i Paamiut i Kalaallit Nunaat

Den høje voldsrate i Kalaallit Nunaat (Grønland) forklares ofte ud fra alkoholmisbrug og affektive handlinger. I denne artikel vises det gennem en kvantitativ og kvalitativ undersøgelse, at den episodiske vold må forstås som symptomer på strukturel vold. Den strukturelle vold er en kontekst, der fremmer følelser af magtesløshed, social isolation, undgåelse af konflikter og undertrykkelse af følelser - indtil de eksploderer i konkret vold. Den strukturelle vold både legitimerer og forstår den konkrete vold, men den åbner også for interventioner, der kan ændre netop den strukturelle vold. Den strukturelle vold er skadelig for unge, da den fremmer og legitimerer vold - men lokal funderede interventioner kan modvirke dette på en virkningsfuld måde.

Unge liv og muligheder: deltagende aktionsforskning i Paamiut

Paamiut Youth Voice (PYV) er et deltagende aktions forskningprojekt (Participatory Action Research, PAR), gennemført med de unge i Paamiut, Kalaallit Nunaat (Grønland). Målet med projektet er at undersøge de unges visioner om og ønsker til hvordan trivsel og deltagelse kan øges. Projektet blev udviklet og iværksat som en del af det overordnede community mobiliseringsprojekt, Paamiut Asasara, og blev baseret på et lokalt formuleret ønske om viden om - og inddragelse af - de unge. Der blev efterspurgt forskning i, hvordan man bedre kan integrere de unge i samfundet, øge deres generelle trivsel, mindske social eksklusion, samt øge deres oplevelse af samhørighed i samfundet. 61 unge i alderen 12-24 deltog i forskningsprojektet. De unges opfattelse og oplevelse af trivsel blev undersøgt, med særlig fokus på individuelle og community styrker og ressourcer, samt deres ideer og drømme om hvordan trivsel og deltagelse kan øges. De unge deltog i fokusgruppeinterviews, individuelle interviews, udfyldelse af et spørgeskema, arrangering af et borgermøde samt i overvejelser omkring undersøgelsens metode og design og analysen af data. Analysen af data pegede på en række vigtige betingelser for at øge de unges trivsel, og de unges ønsker om social samhørighed, social støtte og åben kommunikation, samt fritidsaktiviteter. Desuden udtrykte de unge ønsker om muligheder for rådgivning, samt bedre muligheder for arbejde og uddannelse lokalt. Manglende deltagelse blev begrundet af de unge med manglende erfaring, støtte, færdigheder og selvtillid og manglende synlig ledelse og initiativ blandt de voksne.

COMBAR manual

Many learners in remote regions face communicative barriers to Vocational Education and Training (VET). The barriers can be such as geographical distance, cultural challenges and language.

The COMBAR Teaching Concept tackles three issues:

What kind of pedagogical concepts or tools could help overcoming the communicative barriers?

How could vocational educators reach learners by using methods utilising modern technology?

How to approach the problem of updating the qualifications of low skilled workers in remote areas?

Offshore Oil and Gas Development in the Arctic under International Law: Risk and Responsibility

Offshore Oil and Gas Development in the Arctic under International Law explores the international legal framework for hydrocarbon development in the marine Arctic. It presents an assessment of the careful balance

between States' sovereign rights to their resources, their obligations to uphold the rights of Arctic inhabitants and their duty to prevent injury to other States. It examines the rights of indigenous and other Arctic populations, the precautionary approach, the environmental impact assessment and the duty to monitor offshore hydrocarbon activities. It also analyses the application of the international law of responsibility in the event that the State fails to meet its primary obligations in the absence of a State's wrongful conduct.

Forfatter: Rachael Lorna Johnstone **Type:** Book | Bog **Emner:** Law; Arctic studies; Hydrocarbons; Environmental law; State responsibility; Indigenous peoples

Biorefining and Biotechnology Opportunities in the West Nordic Region

The West Nordic region holds promising opportunities to improve utilisation, sustainability and value from its biological resources. The region's major bioresources available for biorefining and biotechnological applications are the focus of this report. It identifies valuable ingredients in the different resources, processing technologies which are or may be applied, and possible end products obtained from further processing the raw material. An overview of the current operations and products which are being produced within the region is given. The report divides the available bioresources into biodegradable residues of aquatic or land origin and underutilised biomass. High-north specific opportunities and obstacles are highlighted.

Unfreezing Colonial Accounts: New Evidence on Social Mobility in Nineteenth-Century Greenland

The Danish colonial project in Greenland during the nineteenth century has been subject to a polarizing debate in the current Danish and Greenlandic public sphere. On the one hand, there are observers depicting the colonial administration as a benevolent and socially-inclusive, whereas others regard it as a socially-exclusive regime. Using a newly collected dataset of Protestant mission's marriage registers from four West Greenlandic towns (Nuuk, Qaqortoq, Qeqertasuaq and Aasiaat) this paper investigates empirically the hypothesis whether Greenlanders experienced an upward intergenerational occupational mobility over the colonial period. The analysis identifies fathers and sons (grooms) occupational attainment to document quantitatively how the structure of the labor market changed over time. We discuss how the colonial labor market became a key ladder for social mobility after the introduction of administrative reforms and a new institutional agenda in the second half of the nineteenth century. We add to the literature by providing further evidence on the link between historical social mobility and the emergence of inclusive institutions in an arctic indigenous society.

Aasivissuit – Nipisat. Inuit Hunting Ground between Ice and Sea

Climate and topography in West Greenland along a vast west-to-east transect from the ocean and fjords to the ice sheet contains evidence of 4200 years of human history. Fisher-hunter-gatherer cultures have created an organically evolved and continuing cultural landscape based on hunting of land and sea animals, seasonal migrations and settlement patterns, and a rich and well-preserved material and intangible cultural heritage. Large communal winter houses and evidence of communal hunting of caribou via hides and drive systems are distinctive characteristics, along with archaeological sites from the Saqqaq (2500-700 BC), Dorset (800 BC-1 AD), Thule Inuit (from the 13th century) and colonial periods (from the 18th century). The cultural landscape is presented through the histories and landscapes of seven key localities from Nipisat in the west, to Aasivissuit, near the ice cap, in the east. The attributes of the property include buildings, structures, archaeological sites and artefacts associated with the history of the human occupation of the landscape; the landforms and ecosystems of the ice cap, fjords, lakes; natural resources, such as caribou, and other plant and animal species that support the hunting and fishing cultural practices; and the Inuit intangible cultural heritage and traditional knowledge of the environment, weather, navigation, shelter, foods and medicines.
