

## Hydrocarbon Development in the Arctic: Rights and Responsibilities

Hydrocarbon activity can be both harmful and hazardous. It is harmful if, in the course of normal operations, it damages its surrounding environment and/or the interests of other states. States and operators should implement a number of technical measures to ensure that the impacts remain below the legally relevant threshold of 'significant' harm. However, hydrocarbon activities are also inherently hazardous because there is always a risk of a low probability-high impact accident, e.g., an oil spill or an explosion. The harsh conditions of the Arctic coupled with its sensitive biodiversity mean that activities in the Arctic are more hazardous than in more temperate parts of the World.

This paper addresses three themes to clarify the rights and responsibilities of states pursuing offshore hydrocarbon development in the Arctic: international law regarding permanent sovereignty and constraints to protect the environment, the interests of other states and the rights of indigenous and other peoples; the role and limitations of the Arctic Council; and the challenge of indigenous sovereignty and indigenous rights.

## Little Fish, Big Pond: Icelandic Interests and Influence in Arctic Governance

On pretty much any measure of international comparison, Iceland is a little fish. Nevertheless, its geographical location next to the Big Pond that is the Arctic Ocean has put it in a position of influence in a region of growing international importance.

In this paper, we explore Iceland's influence in the Arctic region based on international relations considerations such as its political alliances; and based on international law: Iceland's rights and responsibilities.

The paper presents the Arctic Council and Iceland's role within it before turning to issues that are governed outside of the Arctic Council system, in particular, Arctic fisheries and maritime boundaries. The paper explains Iceland's approach to Arctic cooperation in light of its published policy documents and explores the tools available to Iceland to defend its interests.

observers at the Arctic Council, and the Arctic policies of other observers. They conclude that the intended audience for Verso una strategia is the Arctic States. Therefore, the document emphasises relevant Italian scientific efforts and promotes Italy's oil and gas industry while downplaying the rights of indigenous peoples and avoiding issues of controversy. Publication of the document as a work in progress indicates the ministry's willingness to listen to feedback and adapt its approaches as it develops a more comprehensive and nuanced strategy.
