Biorefining and Biotechnology Opportunities in the West Nordic Region

The West Nordic region holds promising opportunities to improve utilisation, sustainability and value from its biological resources. The region's major bioresources available for biorefining and biotechnological applications are the focus of this report. It identifies valuable ingredients in the different resources, processing technologies which are or may be applied, and possible end products obtained from further processing the raw material. An overview of the current operations and products which are being produced within the region is given. The report divides the available bioresources into biodegradable residues of aquatic or land origin and underutilised biomass. High-north specific opportunities and obstacles are highlighted.
