

Hydrocarbon Development in the Arctic: Rights and Responsibilities

Hydrocarbon activity can be both harmful and hazardous. It is harmful if, in the course of normal operations, it damages its surrounding environment and/or the interests of other states. States and operators should implement a number of technical measures to ensure that the impacts remain below the legally relevant threshold of 'significant' harm. However, hydrocarbon activities are also inherently hazardous because there is always a risk of a low probability-high impact accident, e.g., an oil spill or an explosion. The harsh conditions of the Arctic coupled with its sensitive biodiversity mean that activities in the Arctic are more hazardous than in more temperate parts of the World.

This paper addresses three themes to clarify the rights and responsibilities of states pursuing offshore hydrocarbon development in the Arctic: international law regarding permanent sovereignty and constraints to protect the environment, the interests of other states and the rights of indigenous and other peoples; the role and limitations of the Arctic Council; and the challenge of indigenous sovereignty and indigenous rights.

Begreber om rehabilitering

Under indtryk af en stigende andel af ældre i befolkningen er rehabilitering på vej til at blive en del af kommunernes tilbud. Ikke kun som en opgave for ergo- og fysioterapeuter, men som en tværfaglig opgave, også for det omsorgsfaglige personale. Denne artikel diskuterer forskellige tilgange til rehabilitering og deres konsekvenser for brugerne. Artiklen er en bearbejdning af et oplæg holdt på ICCH-konferencen i august i år og bygger på materiale fra et projekt om rehabilitering i hjemmeplejen i Nuuk, som blev gennemført i 2017.
